

Cellular Outdoor Radio Telemetry Unit

The TBSL1/RFB-3G and TBSL1/RFB-4G are versatile outdoor radio telemetry units, acting as a multisensors wireless bridge that can operate on any 2G or 3G (RFB-3G) / 3G or 4G (RFB-4G) cellular network. They share the core TBSL1 RTU HW and only differ by their interchangeable modem board. This is a flexible platform offering a rich connectivity for multiple usual sensors interfaces used in agricultural applications: SDI-12, pulses and analog. Sensors data is exported to application server through MQTT protocol.

TBSL1/RFB-3G / TBSL1/RFB-4G

Features

- Dual 2G/3G or 3G/4G modem with configurable fallback option
- GSM 900/1800/1900/850
- WCDMA 2100/1900/850/900/800
- LTE region dependant (AUS, US and EU)
- Protocol: MQTT v3.1.1 compliant
- Sensors types: SDI-12, analog (2*12 bits), pulse
- System features:
- o Configurable measurement intervals for each sensor
- o Configurable sensor's alarms: SMS, e-mail
- o Remote configuration of the platform through MQTT
- o Embedded flow meter and totalizer module
- Over The Air Firmware Update
- Power:
- o Lilon/LiPo single cell 3.7V battery 1500-2500mAh with solar panel
- External power supply 6-18V (option)
- USB connectivity for monitoring and platform configuration (PC application)
- IP67 Alu diecast
- External antenna
- Operating Temperature Range: -40°C ... 65°C

Application

Crop yield optimization Irrigation Field monitoring
