# S SAFETY INSTRUCTIONS

This chapter contains important safety instructions that you must follow during operation and storage. Read the following before any operation to ensure your safety and to keep the instrument in the best possible condition.

## Safety Symbols

These safety symbols may appear in this manual or on the instrument.

---

**WARNING**

Warning: Identifies conditions or practices that could result in injury or loss of life.

**CAUTION**

Caution: Identifies conditions or practices that could result in damage to the GPM-8310 or to other properties.

**DANGER High Voltage**

**Attention Refer to the Manual**

**Protective Conductor Terminal**

**Earth (ground) Terminal**

Do not dispose electronic equipment as unsorted municipal waste. Please use a separate collection facility or contact the supplier from which this instrument was purchased.

## Safety Guidelines

---

General Guideline • Make sure that the voltage input level does not exceed AC600V.

### CAUTION

- Make sure the current input level does not exceed 20A.
- Do not place any heavy object on the instrument.
- Avoid severe impact or rough handling that can lead to damaging the instrument.
- Do not discharge static electricity to the instrument.
- Use only mating connectors, not bare wires, for the terminals.
- Do not block or obstruct the cooling fan vent opening.
- Do not perform measurement at the source of a low-voltage installation or at building installations (Note below).
- Do not disassemble the instrument unless you are qualified as service personnel.
- Make sure that the COM terminal to earth is limited to 600Vpk.
- Remove all test leads before disconnecting the mains power cord from the socket.
- If the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.
- The device should be placed in a place where the plug connected to it can be removed easily.

(Note) EN 61010-1:2010 specifies the measurement categories and their requirements as follows. The GPM-8310 falls under category II 600V.

- Measurement category IV is for measurement performed at the source of low-voltage installation.
- Measurement category III is for measurement performed in the building installation.
- Measurement category II is for measurement performed on the circuits directly connected to the low voltage installation.

---

**Power Supply**

**WARNING**

- AC Input voltage: 100-240 VAC 50/60Hz
  - The power supply voltage should not fluctuate more than 10%.
  - Connect the protective grounding conductor of the AC power cord to an earth ground, to avoid electrical shock.
  - If grounding practice is not well implemented, a certain amounts of noises will be generated when connecting to GPM-001, the handy measurement accessory for GPM-8310.
- 

**Cleaning the Instrument**

- Disconnect the power cord before cleaning.
  - Use a soft cloth dampened in a solution of mild detergent and water. Do not spray any liquid.
  - Do not use chemicals containing harsh material such as benzene, toluene, xylene, and acetone.
- 

**Operation Environment**

- Location: Indoor, no direct sunlight, dust free, almost non-conductive pollution (Note below)
- Temperature: 0°C to 40°C
- Humidity: < 30°C: < 80%RH(non-condensing);  
30°C~40°C:<70%RH(non-condensing);  
>40°C: <50%RH (non-condensing)
- Altitude: <2000m
- Overvoltage category: OVC II

(Note) EN 61010-1:2010 specifies the pollution degrees and their requirements as follows. The GPM-8310 falls under degree 2.

- Pollution refers to “addition of foreign matter, solid, liquid, or gaseous (ionized gases), that may produce a reduction of dielectric strength or surface resistivity”.
- Pollution degree 1: No pollution or only dry, non-conductive pollution occurs. The pollution has no influence.
- Pollution degree 2: Normally only non-conductive pollution occurs. Occasionally, however, a temporary conductivity caused by condensation must be expected.
- Pollution degree 3: Conductive pollution occurs, or dry, non-conductive pollution occurs which becomes conductive due to condensation which is expected. In such conditions, equipment is normally protected against exposure to direct sunlight, precipitation, and full wind pressure, but neither temperature nor humidity is controlled.

---

Storage  
environment

- Location: Indoor
- Temperature: -40°C to 70°C
- Humidity: <90%RH(non-condensing)

---

Disposal

Do not dispose this instrument as unsorted municipal waste. Please use a separate collection facility or contact the supplier from which this instrument was purchased. Please make sure discarded electrical waste is properly recycled to reduce environmental impact.

# G ETTING STARTED

This chapter describes the GPM-8310 in a nutshell, including accessories, package contents, its main features and front / rear panel introduction.

---

## Characteristics

The GPM-8310 is a high-precision, programmable power meter for using in standby measuring the device with low power such as switching power supplies, transformers, power supplies, adapter and other devices. It equips with a color TFT-LCD screen and also multiple graph displays which are very convenient for reading the measurement results. The GPM-8310 has become a reliable power measurement instruments because of its simple operation, excellent performance, user-friendly graph displays and automatic measurement interface.

### Operation

- Press the buttons on the front panel to easily turn on the GPM-8310 measurement function. All settings and measurements results are displayed on the 5-inches TFT-LCD screen panel for easy use of each function.
- Standard display mode: 2 main measurement results and 8 secondary measurement results are displayed in this screen.
- Simple display mode: 4 major measurement results are displayed in this screen.

## Performance

- 6 selectable voltage ranges available from 15V to 600V with 0.1% of reading + 0.05% of range.
  - 12 selectable current ranges available from 5mA to 20A with 0.1% of reading + 0.05% of range.
  - It can even measure the voltage of abnormal wave of CF 3. The half-range CF is up to 6 or 6A.
  - It can even measure the current of abnormal wave of CF 3. The half-range CF is up to 6 or 6A.
  - Total harmonic distortion measurement.
  - 50-orders harmonic test and analysis function.
  - Graph display for measurement results including harmonic orders distribution.
  - Plug-in USB disk data store function including log and screenshot.
  - Auto range function for integration measurement.
-

---

## Package Contents

Check the contents before using the instrument.

---

### Opening the box

---

#### Contents (single unit)

- Main unit
- Test leads (red x1, black x1, yellow x1, blue x1)
- Power cord x1 (region dependent)
- User manual CD
- Safety instruction sheet

# Appearance

## Front Panel

Power Key

**POWER**

Turns On  or Off  the main power. For the power up sequence, see page 26.

USB Host Port

Connects with USB flash drive for data storage or screenshot.

Hardcopy Key

**Hardcopy**

Captures the current screenshot or saves the data log for reading. For details, refer to page 67.

**Function Keys**

V-Range key, up/down arrow keys and Enter key can be used together to select a voltage range or auto range measurement mode. Also, press and hold the V-Range key to toggle between manual and auto range setting. See page 29.

I-Range key, up/down arrow keys and Enter key can be used together to select a current range or auto range measurement mode. Also, press and hold the I-Range key to toggle between manual and auto range setting. See page 29.

Press this button to display the maximum measurement reading. See page 88.

Press this key to select measure mode (DC/AC/AC+DC/V-MEAN). See page 89.

Press this key to enter the measurement settings menu. See page 33.

Press this key to switch window and stop refreshing. See page 88.

Use the left and right arrow keys to select Integrator mode, and press Enter button to enter the time integrator function. See page 90.

---

|  |                                                                                   |                                                                                                                       |
|--|-----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|

## Main Display Overview

| Item             | Status icon  | Description                                                                                                        |
|------------------|--------------|--------------------------------------------------------------------------------------------------------------------|
| Voltage Range    | V-Range 15V  | Voltage measurement range.<br>Example here range is 15V.<br><br>V-Auto means that Voltage Auto Range is turned on. |
| Current Range    | I-Range 10A  | Current measurement range.<br>Example here range is 10A.<br><br>I-Auto means that Current Auto Range is turned on. |
| Mode             | AC+DC        | Measurement mode<br>(AC, DC, AC+DC, V-MEAN)                                                                        |
| Date Update Rate | Update 0.25s | Data update rate<br>(0.1/0.25/0.5/1/2/5/10/20/Auto)                                                                |
| Crest Factor     | CF3          | Crest Factor (3/6/6A)                                                                                              |

|                      |           |                                                     |
|----------------------|-----------|-----------------------------------------------------|
| VT Ratio State       | VT        | External voltage magnification (On/Off)             |
| CT Ratio State       | CT        | External current magnification (On/Off)             |
| Power Ratio State    | SF        | External power magnification (On/Off)               |
| Remote               | RMT       | Remote control mode (On/Off)                        |
| Line Filter          | L.F       | Voltage and current filters (On/Off)                |
| Frequency Filter     | F.F       | Frequency filters (On/Off)                          |
| Maximum Hold         | MAX Hold  | Retain and display the maximum measurement reading. |
| Average              | AVG-8     | Average number of sampling (8/16/32/64)             |
| Sync Source          | SYNC.V    | Synchronization source (V/I/Off)                    |
| Keyboard Lock        | Key Lock  | Lock Key button                                     |
| Harmonic Calculation | HRM.I     | Harmonic calculation method (IEC/CSA/Off)           |
| Measure Storage      | STORE     | Measured data storage (On/Off)                      |
| External Input       | EXT1      | External signal input function (Ext1/Ext2/Off)      |
| Display Hold         | Hold      | Retain and display the current measurement reading. |
| Peak Voltage         | P.V       | The voltage exceeds the measurement range           |
| Peak Current         | P.I       | The current exceeds the measurement range           |
| Remote Error         | Error-XXX | An error occurs in remote command                   |

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Standard Display Mode | Display the measurement result of 2 major and 8 minor measurement parameters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Simple Display Mode   | Display the measurement result of 4 major measurement parameters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Secondary menus       | <p>Display secondary function menu</p> <p>To navigate the secondary function menu, use left and right arrow keys alternately. The arrow keys are loopback, which means, for example, when it stops at Graph, press the right arrow key to move to Enlarge in a promptly loopback manner.</p> <ul style="list-style-type: none"> <li>• Enlarge      This function key is used to switch display of measurement result from 2 major plus 8 minor to 4 major ones.</li> <li>• Integrator      This function key is used to set up integrator measurement parameters and execute integrator measurement function.</li> <li>• Parameter      This function key is used set up measurement parameters.</li> <li>• System      This function key is used to enter the system setting and system configuration screens.</li> <li>• Graph      This function key is used to set up graph measurement settings and execute measurement in the intuitive graph displays.</li> </ul> |

## Rear Panel

**Power Cord Socket**

Connects the power cord.  
AC 100~240V  $\pm 10\%$ ,  
50/60Hz

**RS232 Connector**

Accepts an RS-232C cable for remote control; DB-9 male connector. For remote control details, see page 137.

**GPB Connector**

Accepts an optional GPIB card for remote control. For GPIB details, see page 139.

**USB Device Port**

Accepts a USB device cable for remote control; Type B, female connector. For remote control details, see page 136.

LAN Port

Accepts a LAN for remote control. For remote control details, see page 141.

Digital IO / DA4 Connector

Accepts a digital I/O cable for signal output; SCSI 26 pin, female connector. For digital I/O details, see page 121

GND Terminal

Connects the GND (ground) terminal to the earth ground.

Voltage/Current input terminal

Voltage/Current input terminals is used to connect the main measurement signals.

External Input 1/2

Connects output signal to the EXT1 terminal which receives up to 10V, or the EXT2 terminal that receives at the maximum of 2V. See page 59 for setting.

**Warning**

- Do not use damaged device. Before using the equipment, check its housing first to sure there is no any cracks. Do not operate this device in an environment containing explosive gases, steam or dust.
- The maximum measurable current and voltage are 600 V and 20A for voltage and current terminals of the rear panel of the GPM-8310. Do not input exceeded voltage and current, otherwise it will burn the device.
- The maximum input voltage are 10 V and 2V for EXT1 and EX2 terminals of the rear panel of the GPM-8310. Do not input exceeded voltage, otherwise it will burn the device.
- Always use the supplied cable for connection.
- Before connecting the device, observe all the safety symbols marked on the device.
- Turn off the power to the device and the application system before connecting I/O terminals.
- Do not install replacement parts on the device or perform any unauthorized modifications.
- Do not use this device if the removable cover is removed or loosened.
- Do not connect any cables and terminals before performing self-test.
- Use only the power adapter supplied by the manufacturer to avoid accidental injury.
- Do not use this device for life support systems or any other equipment that has safety requirements.

## Set Up

### Tilting the Stand

---

Pull out the handle sideways and rotate it clockwise for the several applications listed below.

---

#### Horizontal

Place the unit horizontally.

#### Tilt

Rotate the handle for tilt stand.

---

#### Vertical

Place the handle vertically for hand carry.

## Power Up

---

### Steps

1. Ensure the AC voltage is 100~ 240V.

2. Connect the power cord to the AC voltage input.

### Note

Make sure the ground connector on the power cord is connected to a safety ground. This will influence the measurement accuracy.

3. Push to turn on the main power switch on the front panel.

4. The display turns on and shows the last function that was used before the power was reset.

## Connect the wires to the GPM-8310

|                    |                                                                                                                                          |                                                                   |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|
| Background         | Two separate wires is used to connect the GPM-8310, so voltage and current measurement are isolated and don't interfere with each other. |                                                                   |
| Connection diagram |                                                         |                                                                   |
| Description        | V +                                                                                                                                      | The positive voltage input (+), 600V for input on the rear panel. |
|                    | V -                                                                                                                                      | The negative voltage input (-), 600V for input on the rear panel. |
|                    | I +                                                                                                                                      | The positive current input (+), 20A for input on the rear panel.  |
|                    | I -                                                                                                                                      | The negative current input (-), 20A for input on the rear panel.  |

## Setting up measurement range

To get the accurate measurement results, you should set an appropriate measurement range before you perform measurement task.

- Set voltage range 1. Press **V-Range** button. The V-Range field turns to bluish.

2. Use up and down arrow keys to select the desired range.

3. Press **Enter** button to confirm your selection.

Available range Crest Factor **AUTO, 15V, 30V, 60V, 150V, 300V, 600V**  
is 3:

Crest Factor **AUTO, 7.5V, 15V, 30V, 75V, 150V, 300V**  
is 6/6A:

- Set current range 1. Press **I-Range** button. The I-Range field turns to bluish.

2. Use up and down arrow keys to select the desired range.

3. Press **Enter** button to confirm your selection.

|                 |                       |                                                                           |
|-----------------|-----------------------|---------------------------------------------------------------------------|
| Available range | Crest Factor is 3:    | AUTO, 5mA, 10mA, 20mA, 50mA, 100mA, 200mA, 0.5A, 1A, 2A, 5A, 10A, 20A     |
|                 | Crest Factor is 6/6A: | AUTO, 2.5mA, 5mA, 10mA, 25mA, 50mA, 100mA, 250mA, 0.5A, 1A, 2.5A, 5A, 10A |

Note

When it is under the manual setting ranging from 5mA to 200mA, the manual range adjusts to auto range automatically if input current exceeds 700mA.

Note

When the measurement range is set manually, if the range status icon lights in green means that the measured value meets the setting range. On the contrary, If the range status icon lights in red means that the measured value doesn't meet the best setting range. In this case. It is better to switch to other range to get more accurate measurement results.

Note

The P.I status icon lights in red when the current measurement circuit detects that the measured value exceeds setting range by 3 folds (CF is set to 3) or 6 folds (CF is set to 6/6A).

Note

The P.V status icon lights in red when the voltage measurement circuit detects that the measured value exceeds setting range by 3 folds (CF is set to 3) or 6 folds (CF is set to 6/6A).

---

## Auto Range

The range is automatically switched according to the voltage and current of input signal.

---

Range is shift up

The range is shifted up when either of the following conditions is met.

- Vrms or Irms exceeds the measurement range by 130% at CF 3/6.
  - Vrms or Irms exceeds the measurement range by 260% at CF 6A.
  - The Vpk or Ipk value of the input signal exceeds the current setting range by 300% at CF 3.
  - The Vpk or Ipk value of the input signal exceeds the current setting range by 600% at CF 6/6A.
- 

Range is shift down

The range is shifted down when all of the following conditions are met.

- Vrms or Irms is equal to or less than the measurement range by 30% at CF 3/6/6A.
- Vrms or Irms is equal to or less than the next lower measurement range by 125% at CF 3/6/6A.
- The Vpk or Ipk value of the input signal is equal to or less than the next lower measurement range by 300% at CF 3.
- The Vpk or Ipk value of the input signal is equal to or less than the next lower measurement range by 600% at CF 6/6A.

## Example

To begin with, the measured Irms value is within the current range of I-Auto 20mA.

The measured Irms (27.194mA) exceeds the I-Auto 20mA by 130%, so the range is shifted up to 50mA automatically.

The measured Irms (3.9994mA) is less than 30% of the I-Auto 20mA, so the range is shifted down to 10mA automatically.

Press <b>Setup</b> button.                                                                                                                                                                                                                                                                                                                                                |  |
|                                                                                   | 2. Press <b>Enter</b> button.                                                                                                                                                                                                                                                                                                                                                |  |
|                                                                                   | 3. Press down arrow key to move cursor to the <b>Frequency Filter</b> field.                                                                                                                                                                                                                                                                                                 |  |
|                                                                                   | 4. Use soft keys to select and confirm the desired option.                                                                                                                                                                                                                                                                                                                   |  |
|  |                                                                                                                                                                                                                                                                                                                                                                              |                                                                                   |
| Option                                                                            | <p><b>On</b> Turn on the frequency filter function, which is inserted into frequency measurement input circuit and affects frequency measurements with high frequency components included within measured values. The <b>F.F</b> status icon on the display lights up in green.</p> <p><b>Off</b> Turn off the frequency filter function. The cutoff frequency is 500Hz.</p> |                                                                                   |
| Default value                                                                     | <b>Off</b>                                                                                                                                                                                                                                                                                                                                                                   |                                                                                   |

## Setting up crest factor

- |       |                                                                          |                                                                                   |
|-------|--------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| Steps | 1. Press <b>Setup</b> button.                                            |  |
|       | 2. Press <b>Enter</b> button.                                            |  |
|       | 3. Press down arrow key to move cursor to the <b>Crest Factor</b> field. |  |
|       | 4. Use soft keys to select and confirm the desired option.               |  |

- |        |    |                                                                                                                                                                                                                       |
|--------|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Option | 3  | Crest Factor is 3.                                                                                                                                                                                                    |
|        | 6  | Crest Factor is 6.                                                                                                                                                                                                    |
|        | 6A | Crest Factor is 6A where input range of measurement range will be extended and greater than 6. This is practical for restraining from frequent range changes while measuring, under auto range, a distorted waveform. |

|               |   |
|---------------|---|
| Default value | 3 |
|---------------|---|

## Setting up auto-zero function

|               |                                                                                                                                                                                                                                                                  |                                                                                   |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| Steps         | 1. Press <b>Setup</b> button.                                                                                                                                                                                                                                    |  |
|               | 2. Press <b>Enter</b> button.                                                                                                                                                                                                                                    |  |
|               | 3. Press down arrow key to move cursor to the <b>Auto Zero</b> field.                                                                                                                                                                                            |  |
|               | 4. Use soft keys to select and confirm the desired option.                                                                                                                                                                                                       |  |
|               |                                                                                                                                                                                 |                                                                                   |
| Option        | <p><b>On</b> Auto-zero function is activated once per hour or when range is switched.</p> <p><b>Off</b> Auto-zero function is only activated once when the range is switched. The auto-zero function is turned off when the integrator function is executed.</p> |                                                                                   |
| Default value | <b>Off</b>                                                                                                                                                                                                                                                       |                                                                                   |

## Setting up method of calculating harmonics

- |       |                                                                       |                                                                                   |
|-------|-----------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| Steps | 1. Press <b>Setup</b> button.                                         |  |
|       | 2. Press <b>Enter</b> button.                                         |  |
|       | 3. Press down arrow key to move cursor to the <b>Harmonics</b> field. |  |
|       | 4. Use soft keys to select and confirm the desired option.            |  |

|               |            |                                                                                                                                                                                                                                 |
|---------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Option        | <b>IEC</b> | Calculate the ratio of harmonic quantity of the 2nd through the upper limit 50th harmonic to the 1st harmonic. The <b>HRM.I</b> status icon, for example, on the display lights up in green when IEC is selected for harmonics. |
|               | <b>CSA</b> | Calculate the ratio of harmonic quantity of the 2nd through the upper limit 50th harmonic to the 1st through the 50th harmonic.                                                                                                 |
|               | <b>Off</b> | Turn off the harmonic calculation function.                                                                                                                                                                                     |
| Default value | <b>IEC</b> |                                                                                                                                                                                                                                 |

- |       |                                                                |                                                                                     |
|-------|----------------------------------------------------------------|-------------------------------------------------------------------------------------|
| Steps | 5. Press right arrow key to move cursor to <b>Order</b> field. |  |
|-------|----------------------------------------------------------------|-------------------------------------------------------------------------------------|

6. Use soft keys to increase or decrease the order number.

|        |      |                                                                               |
|--------|------|-------------------------------------------------------------------------------|
| Option | 1-50 | Set the upper limit of measured harmonic order within the range from 1 to 50. |
|--------|------|-------------------------------------------------------------------------------|

|               |    |
|---------------|----|
| Default value | 50 |

## Setting up data update rate

- |       |                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Steps | 1. Press <b>Setup</b> button.                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|       | 2. Press <b>Enter</b> button.                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|       | 3. Press down arrow key to move cursor to the <b>Data Update Rate</b> field.                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|       | 4. Use soft keys to select and confirm the desired option. Press the “ <b>More</b> ” soft keys to toggle among pages for further options. | <br><br><br><br><br> |

- |        |                                                            |                                                                                                                                                                                                                                                                                            |
|--------|------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Option | <b>0.1s/0.25s/0.5s/1s/2s/5s/10s/20s</b><br><br><b>Auto</b> | <p>Measured value is updated in accordance with the designated time interval. The <b>Update 5s</b> status icon, for example, on the display lights up in green when 5s option is selected.</p> <p>Data is only updated when a set period (Time Out) of the input waveform is detected.</p> |
|--------|------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|               |              |
|---------------|--------------|
| Default value | <b>0.25s</b> |
|---------------|--------------|

- |       |                                                                                          |                                                                                     |
|-------|------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| Steps | 5. When Auto is selected, press right arrow key to move cursor to <b>Time Out</b> field. |  |
|-------|------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|

6. Use soft keys to select and confirm the desired option.

|               |                   |                                                                                        |
|---------------|-------------------|----------------------------------------------------------------------------------------|
| Option        | 1s/5s/<br>10s/20s | Time Out period acts like the time limit for detecting a period of the input waveform. |
| Default value | 1s                |                                                                                        |

Note

Time Out function is only available when Auto is selected for Data Update Rate.

## Setting up measure storage

- |       |                                                                             |                                                                                   |
|-------|-----------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| Steps | 1. Press <b>Setup</b> button.                                               |  |
|       | 2. Press <b>Enter</b> button.                                               |  |
|       | 3. Press down arrow key to move cursor to the <b>Measure Storage</b> field. |  |

Note

Measure Storage function is Not available when Auto is selected for Data Update Rate.

4. Use soft keys to select and confirm the desired option.

|        |           |                                                                                                                                                                                                                                                 |
|--------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Option | <b>On</b> | All measured date will be stored to the internal memory by designated time interval for repeating the storage operation. The <b>STORE</b> status icon, for example, on the display lights up in green when Measure Storage function is turn on. |
|--------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|            |                                        |
|------------|----------------------------------------|
| <b>Off</b> | Turn off the measure storage function. |
|------------|----------------------------------------|

|               |            |
|---------------|------------|
| Default value | <b>Off</b> |
|---------------|------------|

- |       |                                                                  |                                                                                     |
|-------|------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| Steps | 5. Press down arrow key to move cursor to <b>Interval</b> field. |  |
|-------|------------------------------------------------------------------|-------------------------------------------------------------------------------------|

6. Use soft keys to increase or decrease the interval.

|               |                                                              |
|---------------|--------------------------------------------------------------|
| Option        | The setting range for Interval is from 00:00:00 to 99:59:59. |
| Default value | 00:00:00                                                     |

Note

When it is set 00:00:00, the interval for measure storage will be synchronized with the designated Data Update Rate.

Storage stops in the following circumstances:

- When data has been stored to all blocks, Normal measure data can be stored 10000 blocks and Normal with Harmonic data can be stored 1000 blocks.
- When the storage setting is set to Off (while storage is in progress)
- If you press the HOLD key to hold the display while storage is in progress, the measurement operation and the storage interval time counter are held (paused), which causes the storage operation itself to be held. If integration is in progress, this instrument continues measurement and integration in the background.

Setting up average function

|                                                                                   |                                                                   |                                                                                                                                                                                    |
|-----------------------------------------------------------------------------------|-------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Steps                                                                             | 1. Press <b>Setup</b> button.                                     |                                                                                                   |
|                                                                                   | 2. Press <b>Average</b> soft key.                                 |                                                                                                   |
|                                                                                   | 3. Press <b>Enter</b> button.                                     |                                                                                                   |
|                                                                                   | 4. Press down arrow key to move cursor to the <b>State</b> field. |                                                                                                   |
|                                                                                   | 5. Use soft keys to select and confirm the desired option.        |                                                                                                   |
|  |                                                                   |                                                                                                                                                                                    |
| Option                                                                            | <b>On</b>                                                         | Turn Average function On for either Linear or Exponential averages of numeric data. It is particularly practical for large changes in load or power of low input signal frequency. |
|                                                                                   | <b>Off</b>                                                        | Turn off Average function.                                                                                                                                                         |
| Default value                                                                     | <b>Off</b>                                                        |                                                                                                                                                                                    |
| Steps                                                                             | 6. Press down arrow key to move cursor to <b>Type</b> field.      |                                                                                                 |

7. Use soft keys to select and confirm the desired option.

|        |                 |                                                                                    |
|--------|-----------------|------------------------------------------------------------------------------------|
| Option | <b>Linear</b>   | With the designated linear count, it is used to compute linear averages.           |
|        | <b>Exponent</b> | With the specified attenuation count, numeric data will be averaged exponentially. |

Default value      **Linear**

- Steps      8. Press down arrow key to move cursor to **Count** field.

9. Use soft keys to select and confirm the desired option.

|        |                        |                                                                                                                                                                                                           |
|--------|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Option | <b>8/16/<br/>32/64</b> | It includes 8, 16, 32 and 64 for exponentially attenuation count and linearly average count. The <b>AVG-8</b> status icon, for example, on the display lights up in green when 8 is selected for average. |
|--------|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Default value      **8**

## Setting up the voltage and current skipping configuration

- |       |                                                                  |                                                                                   |
|-------|------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| Steps | 1. Press <b>Setup</b> button.                                    |  |
|       | 2. Press <b>V / I Range</b> soft key.                            |  |
|       | 3. Press <b>Enter</b> button.                                    |  |
|       | 4. Press down arrow key to move cursor to the <b>Mode</b> field. |  |
|       | 5. Use soft keys to select and confirm the desired option.       |  |

- |        |              |                                                                                                                                                                   |
|--------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Option | <b>Menu</b>  | When user is configuring range setting, the measured data will Not be displayed.                                                                                  |
|        | <b>Quick</b> | The measured data will be displayed simultaneously while measurement range is being switched by user. This is practical for frequent switch of measurement range. |

|                |             |
|----------------|-------------|
| Default option | <b>Menu</b> |
|----------------|-------------|

- |       |                                                                         |                                                                                     |
|-------|-------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| Steps | 6. Press down arrow key to move cursor to <b>Skipping Config</b> field. |  |
|-------|-------------------------------------------------------------------------|-------------------------------------------------------------------------------------|

7. Use soft keys to select and confirm the desired option.

Option

- On** It is able to skip certain measurement range(s) that are not used by turning on this feature. It can reduce measured data loss which happens while ranges are switched.
- Off** Turn off the function.

Default option

**Off**

Steps

8. Press down arrow key to move cursor to each field of both **V-Range** and **I-Range**.

9. Use soft keys to enable or disable the skipping function for each range.

Option

- On** The box of range will be checked when the range is enabled for skipping function.
- Off** The range is disabled for skipping function.

Default option      **Off**

Steps

10. Press down arrow key to move cursor to **Peak Over** field for V-Range and I-Range, respectively.

11. Use soft keys to select and confirm the desired option. Press the **More** soft key to toggle among pages for Peak Over of V-Range and I-Range.

Option

When the occurrence of peak over-range happens in Auto range mode, user is able to define a measurement range to switch to. The available options for each mode are listed below.

When it is under CF3 mode for V-Range.

**Off/15V/30V /60V/150V/300V/600V**

When it is under CF6/6A mode for V-Range.

**Off/7.5V/15V /30V/75V/150V/300V**

When it is under CF3 mode for I-Range.

**Off/5mA/10mA/20mA/50mA/100mA/200mA/0.5A /1A/2A/5A/10A/20A**

When it is under CF6/6A mode for I-Range.

**Off/2.5mA/5mA/10mA/25mA/50mA/100mA/250 mA/0.5A/1A/2A/5A/10A**

Default option      **Off**

Note

The available options for Peak Over field are limited within the selected options from the V-Range and I-Range sections above.

## Setting up the skipping configuration for external

- |       |                                                                         |                                                                                   |
|-------|-------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| Steps | 1. Press <b>Setup</b> button.                                           |  |
|       | 2. Press <b>V / I Range</b> soft key.                                   |  |
|       | 3. Press <b>Enter</b> button.                                           |  |
|       | 4. Press down arrow key to move cursor to <b>Skipping Config</b> field. |  |
|       | 5. Use soft keys to select and confirm the desired option.              |  |

- |        |            |                                                                                                                                                                                           |
|--------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Option | <b>On</b>  | It is able is skip certain measurement range(s) that are not used by turning on this feature for external input. It can reduce measured data loss which occurs while ranges are switched. |
|        | <b>Off</b> | Turn off the function.                                                                                                                                                                    |

Default option **Off**

- |       |                                    |                                                                                     |
|-------|------------------------------------|-------------------------------------------------------------------------------------|
| Steps | 6. Press <b>ESC</b> button.        |  |
|       | 7. Press <b>External</b> soft key. |  |

8. Press **Enter** button.

9. Press down arrow key to move cursor to each field of either **External Sensor 1** or **External Sensor 2**.

10. Use soft keys to enable or disable the skipping function for each range.

|                |            |                                                                                   |
|----------------|------------|-----------------------------------------------------------------------------------|
| Option         | <b>On</b>  | The box of range will be checked when the range is enabled for skipping function. |
|                | <b>Off</b> | The range is disabled for skipping function.                                      |
| Default option | <b>Off</b> |                                                                                   |

Steps

11. Press down arrow key to move cursor to **Peak Over** field for External Sensor 1 or External Sensor 2, respectively.

12. Use soft keys to select and confirm desired option. Press **More** soft key to toggle among pages for Peak Over of Ext-1 and Ext-2, respectively.

More  
1/2

Option When the occurrence of peak over-range happens in Auto range mode for external input, user is able to define a measurement range to switch to. The available options for each mode are listed below.

When it is under CF3 mode for External Sensor 1.

**Off/2.5V/5V/10V**

When it is under CF6/6A mode for External Sensor 1.

**Off/1.25V/2.5V/5V**

When it is under CF3 mode for External Sensor 2.

**Off/50mV/100mV/200mV/500mV/1V/2V**

When it is under CF6/6A mode for External Sensor 2.

**Off/25mV/50mV/100mV/250mV/0.5V/1V**

Default option **Off**

Note

- The available external is based on which external sensor input is enabled beforehand. Be aware that it requests to enable either Ext1 or Ext2 prior to enabling the skipping config for external.
- The available options for Peak Over field are limited within the selected options from the External Sensor 1 and External Sensor 2 sections above.

Setting up the VT ratio state

- |       |                                                                            |                                                                                   |
|-------|----------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| Steps | 1. Press <b>Setup</b> button.                                              |  |
|       | 2. Press <b>Ratio</b> soft key.                                            |  |
|       | 3. Press <b>Enter</b> button.                                              |  |
|       | 4. Press down arrow key to move cursor to the <b>VT Ratio State</b> field. |  |
|       | 5. Use soft keys to select and confirm the desired option.                 |  |

- |        |                                                                                                                                            |
|--------|--------------------------------------------------------------------------------------------------------------------------------------------|
| Option | <b>On</b> Turn on the VT (Voltage Transformer) ratio calculation function and the <b>VT</b> status icon on the display lights up in green. |
|        | <b>Off</b> Turn off the VT ratio calculation function.                                                                                     |

Default option      **Off**

- |       |                                                               |                                                                                     |
|-------|---------------------------------------------------------------|-------------------------------------------------------------------------------------|
| Steps | 6. Press down arrow key to move cursor to <b>Ratio</b> field. |  |
|-------|---------------------------------------------------------------|-------------------------------------------------------------------------------------|

7. Use soft keys to increase or decrease coefficient of VT ratio.

|               |                                                              |
|---------------|--------------------------------------------------------------|
| Option        | The setting range for VT Ratio is from 0000.001 to 9999.999. |
| Default value | 0001.000                                                     |

Setting up the CT ratio state

|                                                                                   |                                                                            |                                                                                                                                  |
|-----------------------------------------------------------------------------------|----------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Steps                                                                             | 1. Press <b>Setup</b> button.                                              |                                                 |
|                                                                                   | 2. Press <b>Ratio</b> soft key.                                            |                                                 |
|                                                                                   | 3. Press <b>Enter</b> button.                                              |                                                 |
|                                                                                   | 4. Press down arrow key to move cursor to the <b>CT Ratio State</b> field. |                                                 |
|                                                                                   | 5. Use soft keys to select and confirm the desired option.                 |                                                 |
|  |                                                                            |                                                                                                                                  |
| Option                                                                            | <b>On</b>                                                                  | Turn on the CT (Current Transformer) ratio calculation function and the <b>CT</b> status icon on the display lights up in green. |
|                                                                                   | <b>Off</b>                                                                 | Turn off the CT ratio calculation function.                                                                                      |
| Default option                                                                    | <b>Off</b>                                                                 |                                                                                                                                  |
| Steps                                                                             | 6. Press down arrow key to move cursor to <b>Ratio</b> field.              |                                               |

7. Use soft keys to increase or decrease coefficient of CT ratio.

|               |                                                              |
|---------------|--------------------------------------------------------------|
| Option        | The setting range for CT Ratio is from 0000.001 to 9999.999. |
| Default value | 0001.000                                                     |

Setting up the power ratio state

|                                                                                   |                                                                               |                                                                                                               |

| Steps                                                                             | 1. Press <b>Setup</b> button.                                                 |                              |
|                                                                                   | 2. Press <b>Ratio</b> soft key.                                               |                              |
|                                                                                   | 3. Press <b>Enter</b> button.                                                 |                              |
|                                                                                   | 4. Press down arrow key to move cursor to the <b>Power Ratio State</b> field. |                              |
|                                                                                   | 5. Use soft keys to select and confirm the desired option.                    |                              |
|  |                                                                               |                                                                                                               |
| Option                                                                            | <b>On</b>                                                                     | Turn on the power ratio calculation function and the <b>SF</b> status icon on the display lights up in green. |
|                                                                                   | <b>Off</b>                                                                    | Turn off the power ratio calculation function.                                                                |
| Default option                                                                    | <b>Off</b>                                                                    |                                                                                                               |
| Steps                                                                             | 6. Press down arrow key to move cursor to <b>Ratio</b> field.                 |                            |

7. Use soft keys to increase or decrease coefficient of power ratio.

Option The setting range for power ratio is from 0000.001 to 9999.999.

Default value 0001.000

## Setting up the external sensor input terminal

|        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                   |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| Steps  | 1. Press <b>Setup</b> button.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
|        | 2. Press <b>External</b> soft key.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
|        | 3. Press <b>Enter</b> button.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
|        | 4. Press down arrow key to move cursor to the <b>External Sensor State</b> field.                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
|        | 5. Use soft keys to select and confirm the desired option.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
|        |                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                   |
| Option | <p><b>Ext1</b> Turn on the Ext1 terminal function that receives voltage up to 10V including shunts and clamps from external output current sensor for measurement and the <b>EXT1</b> status icon on the display lights up in green.</p> <p><b>Ext2</b> Almost identical with the Ext1, the <b>Ext2</b> terminal receives up to 2V voltage and the <b>EXT2</b> status icon on the display lights up in green when it is enabled.</p> <p><b>Off</b> Turn off the external sensor input and return to current input terminal.</p> |                                                                                   |

|                |            |
|----------------|------------|
| Default option | <b>Off</b> |
|----------------|------------|

- |       |                                                                                                                                                                                                                 |                                                                                                                                                                            |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Steps | <p>6. Press down arrow key to move cursor to either <b>Ext1 Ratio (V/A)</b> or <b>Ext2 Ratio (mV/A)</b> field.</p> <p>7. Use soft keys to increase or decrease the conversion ratio of either Ext1 or Ext2.</p> | <br><br> |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|        |                                                                        |
|--------|------------------------------------------------------------------------|
| Option | The setting range for both Ext1 and Ext2 is from 0000.001 to 9999.999. |
|--------|------------------------------------------------------------------------|

|               |      |                 |
|---------------|------|-----------------|
| Default value | Ext1 | <b>0001.000</b> |
|               | Ext2 | <b>0010.000</b> |

Note

In order to enable range skipping configuration for external (page 50), it is required to enable external input function first.

## Saving and loading the setup parameters

|                                                                                    |                                                                  |                                                                                     |

|                                                                                    | 2. Press <b>Page 1/2</b> soft key.                               |    |
|                                                                                    | 3. Press <b>Save Load</b> soft key.                              |    |
|                                                                                    | 4. Press <b>Enter</b> button.                                    |    |
|                                                                                    | 5. Press down arrow key to move cursor to the <b>Type</b> field. |    |
|                                                                                    | 6. Use soft keys to select and confirm the desired action.       |    |
|  |                                                                  |                                                                                     |
| Option                                                                             | <b>Save</b>                                                      | Select Save to store setup parameters into the internal memory.                     |
|                                                                                    | <b>Load</b>                                                      | Select Load to recall setup parameters back from the internal memory.               |
| Default option                                                                     | <b>Save</b>                                                      |                                                                                     |
| Steps                                                                              | 7. Press down arrow key to move cursor to <b>File</b> field.     |  |

8. Use soft keys to select and confirm the desired memory set followed by clicking **Ok** soft key to confirm the Save or Load action.

|        |       |                                                                                                                                                                                                                                                                                               |
|--------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Option | 1 - 4 | There are 4 sets of internal memories for saving and loading setup parameters. The <b>State</b> field below indicates the status of selected memory set.<br>Free represents the set is empty without saved parameters, whereas Saved indicates the set has been stored with setup parameters. |
|--------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Default option      1

## Setting up the D/A output configuration

Steps

1. Press **Setup** button.

2. Press **Page 1/2** soft key.

3. Press **D/A** soft key.

4. Press **Enter** button.

**Note** Since the DA4 connector is an optional accessory, if it is not available on your unit, the D/A soft key will be disabled in grey color as the figure below shown.

5. Press down arrow key to move cursor to the **Default Mode** field.

6. Use soft keys to select and confirm the desired option.

Option                      **Normal**                      The D/A output parameters for each channel will be changed to the default setting of Normal mode as follows.

| Normal Mode | Default value |
|-------------|---------------|
| CH1         | V             |
| CH2         | I             |
| CH3         | P             |
| CH4         | VHz           |

**Integrator**                      The D/A output parameters for each channel will be changed to the default setting of Integrator mode as follows.

| Integrator Mode | Default value |
|-----------------|---------------|
| CH1             | P             |
| CH2             | WP            |
| CH3             | q             |
| CH4             | VHz           |

Default option                      **Normal**

- Steps                      7. Press down arrow key to move cursor to **Rated Integrator** field.

8. Use soft keys to increase or decrease time for rated integrator.

Option

In the integrated values of D/A output, GPM-8310 presumes a rated value is received continuously over the designated time to be 100%, and assigns the value to 5V. The setting range for time of rated integrator is from 0000:00:00 to 9999:59:59. When the time is set 0000:00:00, D/A output value will be 0V.

Default value

0001.00:00

Steps

9. Press down arrow key to move cursor to **CH1**, **CH2**, **CH3**, **CH4** field, respectively.

10. Use soft keys to select and confirm desired option. Press **More** soft key to toggle among pages for options.

Option

It is available to designate the following output items for each output channel.

V          Voltage

|            |                      |
|------------|----------------------|
| <b>I</b>   | Current              |
| <b>P</b>   | Active power         |
| <b>VA</b>  | Apparent power       |
| <b>VAR</b> | Reactive power       |
| <b>PF</b>  | Power factor         |
| <b>DEG</b> | Phase angle          |
| <b>VHz</b> | Voltage frequency    |
| <b>IHz</b> | Current frequency    |
| <b>VpK</b> | Voltage peak         |
| <b>IpK</b> | Current peak         |
| <b>WP</b>  | Total watt hour      |
| <b>WP+</b> | Positive watt hour   |
| <b>WP-</b> | Negative watt hour   |
| <b>q</b>   | Total ampere hour    |
| <b>q+</b>  | Positive ampere hour |
| <b>q-</b>  | Negative ampere hour |
| <b>Off</b> | 0V D/A Output        |

## Setting up the hardcopy and log configuration

|                                                                                    |                                                                  |                                                                                                                            |
|------------------------------------------------------------------------------------|------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| Steps                                                                              | 1. Press <b>Setup</b> button.                                    |                                           |
|                                                                                    | 2. Press <b>Page 1/2</b> soft key.                               |                                           |
|                                                                                    | 3. Press <b>Hardcopy</b> soft key.                               |                                           |
|                                                                                    | 4. Press <b>Enter</b> button.                                    |                                           |
|                                                                                    | 5. Press down arrow key to move cursor to the <b>Type</b> field. |                                           |
|                                                                                    | 6. Use soft keys to select and confirm the desired option.       |                                           |
|  |                                                                  |                                                                                                                            |
| Option                                                                             | <b>Capture</b>                                                   | Select Capture to save screenshot file into the inserted USB disk. The file name ranges from SCREEN00.BMP to SCREEN99.BMP. |
|                                                                                    | <b>Log</b>                                                       | Select Log to save data log file into the inserted USB disk. The file name ranges from DATA000.CSV to DATA999.CSV          |
| Default option                                                                     | <b>Capture</b>                                                   |                                                                                                                            |

Steps

7. Press down arrow key to move cursor to **Overwrite** field.

8. Use soft keys to select and confirm the desired action.

Option

- |            |                                                                                                                               |
|------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>On</b>  | Turn on overwrite function so that the existed file within the USB disk will be overwritten when saving action is executed.   |
| <b>Off</b> | By turning off overwrite function, a new saved file will be created and saved into the USB disk when executing saving action. |

Default option

**Off**

Note

When Overwrite function is On, the latest file name in the inserted USB disk will be overwritten. For instance, when both DATA000.CSV and DATA001.CSV exist in USB disk, the DATA001.CSV will be overwritten accordingly when saving file.

When, on the other hand, Overwrite function is Off, a new one with the latest file name will be created. However, for example, when both SCREEN00.BMP and SCREEN02.BMP exist, a new file named SCREEN01.BMP will be saved since system fills filename vacancy automatically. Also, when saved files are full in USB disk, e.g., from SCREEN00.BMP to SCREEN99.BMP, a warning message will be shown and save action will be Not available.

## Setting up the MATH configuration

|                |                                                                                    |                                                                                                                                                                                                                                                                                                                                         |
|----------------|------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Steps          | 1. Press <b>Setup</b> button.                                                      |                                                                                                                                                                                                                                                        |
|                | 2. Press <b>Page 1/2</b> soft key.                                                 |                                                                                                                                                                                                                                                        |
|                | 3. Press <b>MATH</b> soft key.                                                     |                                                                                                                                                                                                                                                        |
|                | 4. Press <b>Enter</b> button.                                                      |                                                                                                                                                                                                                                                        |
|                | 5. Press down arrow key to move cursor to the <b>Computation</b> field.            |                                                                                                                                                                                                                                                        |
|                | 6. Use soft keys to select and confirm the desired option.                         |                                                                                                                                                                                                                                                        |
|                |  |                                                                                                                                                                                                                                                                                                                                         |
| Option         | <b>A+B, A-B,<br/>A*B, A/B,<br/>A/B<sup>2</sup>, A<sup>2</sup>/B</b>                | Up to 6 computations (A+B, A-B, A×B, A÷B, A÷B <sup>2</sup> , A <sup>2</sup> ÷B), which are based on the four elementary arithmetic (addition, subtraction, multiplication and division), can be executed by GPM-8310 with 2 select items out of 5 variables (V, I, P, VA, VAR). The result of computation will be a value without unit. |
| Default option | <b>A/B</b>                                                                         |                                                                                                                                                                                                                                                                                                                                         |

Steps

- 7. Press down arrow key to move cursor to **Item A** field.
- 8. Use soft keys to select and confirm the desired option.

Option

- V Voltage
- I Current
- P Active power
- VA Apparent power
- VAR Reactive power

Default option

V

Steps

9. Press down arrow key to move cursor to **Item B** field.

10. Use soft keys to select and confirm the desired option.

Option

- V Voltage
- I Current
- P Active power
- VA Apparent power
- VAR Reactive power

Default option

I

## Setting up System status

### System information screen

#### Steps

1. Use left and right arrow keys on the front panel to select **System** function key.

2. Press **Enter** button to Enter **SYSTEM INFORMATION** screen where detailed information including Model, Serial Number, MCU/FPGA Version and MAC Address of the unit is displayed.

3. Press **Enter** button.

4. Press down arrow key to move cursor to **Calibration Password** field.

- Use soft keys along with left and right arrow keys to input the password followed by pressing **Enter** button twice to enter the Calibration page.

Default option

**99999**

Note

Refer to qualified technician and service manual for the calibration procedure.

## System configuration screen

Steps

- Use left and right arrow keys on the front panel to select **System** function key.
- Press **Enter** button to Enter SYSTEM INFORMATION screen.
- Press **Config** soft key to Enter **SYSTEM CONFIG** setting screen.

Setting up power on status

## Setting up remote interface

Background Continue the following setting from **SYSTEM CONFIG** setting screen

Steps

1. Press **Enter** button.
2. Press down arrow key to move cursor to **I/O Model** field.
3. Use soft keys to select and confirm the desired option.

Option

**RS232**

If interface is set to RS232, the **Baud Rate** and the **Terminator** fields can be selected. For details about configuring RS 232 interface, please see page 137.

**USB** For details about configuring USB interface, please see page 136.

**GPIB** If interface is set to GPIB, the **GPIB Address** can be selected from “1” to “30”. Please see page 139 for details.

**LAN** If interface is set to LAN, the IP model is can be selected from “Manual” and “DHCP”. For details about configuring LAN interface, please see page 141.

## Setting up SCPI identity

|               |                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                  |

## Measurement function

The GPM-8310 provides a wide range of basic electricity and power measurement functions. It equips with different accurate measurement parameters for accurately measuring the voltage, current, power, DC/AC/AC + DC/V-MEAN, power factor, harmonics, frequency, etc. The input impedance of the device is  $2M\Omega$ , the maximum input voltage is 600Vrms. There are 2 sets of internal resistance (Shunt),  $500m\Omega$  and  $5m\Omega$  respectively. Also, there are 2 external current input terminals (EXT1, EXT2). The maximum input current is 20Arms. The device will issue a warning sound when the input voltage and current exceed 850 Vrms or 28.5Arms.

### Introduction to measurement parameters

| Parameter name | Display icon                                         |
|----------------|------------------------------------------------------|
| Voltage        | Vac (AC)<br>Vdc (DC)<br>Vrms (AC+DC)<br>Vmn (V-MEAN) |
| Current        | Iac (AC)<br>Idc (DC)<br>Irms (AC+DC, V-MEAN)         |
| Active Power   | P                                                    |

|                                                             |            |
|-------------------------------------------------------------|------------|
| Apparent Power                                              | VA         |
| Reactive power                                              | VAR        |
| Power Factor                                                | PF         |
| Phase Angle                                                 | DEG        |
| Frequency                                                   | IHz, VHz   |
| Voltage Peak                                                | V+pk, V-pk |
| Current Peak                                                | I+pk, I-pk |
| Active Power Peak                                           | P+pk, P-pk |
| Total Harmonic Distortion                                   | THDI, THDV |
| Crest factor                                                | CFV, CFI   |
| Mathematical Computation                                    | MATH       |
| Maximum Current Ratio<br>(Crest Factor(CFI) / Power Factor) | MCR        |

## Setting measurement parameters

### Steps

1. Use left and right arrow keys on the front panel to select **Parameter** function key.

2. Press **Enter** button. The 1st measurement parameter will be highlighted in green.

3. Press up, down, left and right arrow keys to select other desired measurement parameter.

4. Press **Enter** button followed by using up and down arrow keys to switch display options for the selected measurement parameter.

5. User is able to apply the previous same process for each measurement parameter. There are up to 2 major and 8 minor measurement parameters to be switched.

## Changing the standard and simple display modes

### Steps

1. In the standard display mode, use left and right arrow keys on the front panel to select **Enlarge** function key.

2. Press **Enter** button to switch display to simple mode.

The simple mode covers 4 major measurement parameters deriving from the top 4 parameters of standard mode as shown below.

- Press **ESC** button to return back to original display mode.

**ESC**

## Other functions

### Introduction to other functions

| Function name | Button | Description |
|---------------|--------|-------------|
|---------------|--------|-------------|

---

MAX Hold

When the **MAX Hold** button is pressed, the MAX Hold status icon will light in red in the LCD display to indicate that this function is activated. To deactivate this function, press this button again.

If the MAX Hold function is activated, the display value on the display is updated only when the current measured value is greater than the previous measured value. The maximum display value is retained on the display. Only the following parameters are available for MAX Hold function: V, I, P, S, Q, V+pk, V-pk, I+pk, I-pk, P+pk, and P-pk.

---

Enter

This button is used to select function or confirm selection.

---

Hold

When the **Hold** button is pressed, the Hold status icon will light in red in the LCD display to indicate that this function is activated. To deactivate this function, press this button again.

When the Hold function is activated, the displayed value on the LCD display is not updated and the range is locked. Measurement is performed in the background.

---

Trigger

Press the **Trigger** button when Hold function is activated to update displayed value to the latest status once in accordance with the Data Update Rate period.

---

| ESC             |  | This button is used to exit current screen or return to the main measurement screen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Local/ Key Lock |  | Dual function key. When Remote mode is activated, press this button to deactivate Remote mode and switch to Local mode. When Remote mode is not activated, this button is used as lock key of keypad.                                                                                                                                                                                                                                                                                                                                                                                                             |
| Mode            |  | <p>Press the Mode button to select measurement mode. There are 4 measurement modes.</p> <ul style="list-style-type: none"> <li>• <b>AC+DC</b>: Displays all the components of measurement signal.</li> <li>• <b>DC</b>: Displays the DC part of the measurement signal.</li> <li>• <b>AC</b>: Displays the AC part of the measurement signal.</li> <li>• <b>V-MEAN</b>: Displays the voltage rectified as a mean value that is calibrated to RMS value. The value is same with those obtained from RMS mode when sine waves are measured, but it is different when DC or distorted waves are measured.</li> </ul> |

# Integration measurement function

## Setting up Integrator measurement

### Steps

1. Use left and right arrow keys on the front panel to select **Integrator** function key.

2. Press **Enter** button to enter the integrator measurement screen.

3. Press right arrow key to move cursor to **Set** key.

Select integrator  
measurement  
mode

4. Press **Enter** button to enter integrator measurement setting screen.

5. Press **Enter** button to enter **Mode** field. Use up and down arrow keys to toggle between Manual, Standard and Continuous mode. Press **Enter** button again to confirm your selection.

If you select **Manual** mode, the Set time become disable and displayed in gray.

If you select **Standard** or **Continuous** mode, you need to set integrator measurement time before using integrator function. It can be set from 1 second to 9999 hours, 59 minutes and 59 seconds.

Note

When the Set Time is zero, neither Standard mode nor Continuous mode can be executed.

Select integrator  
measurement  
function

6. Press down arrow key to move to **Function** field in the integrator measurement setting screen.

7. Press **Enter** button to enter **Function** field. Use up and down arrow keys to toggle between Ampere Hours and Watt Hours. Press **Enter** button again to confirm your selection.

If you select **Ampere Hours**, the measured value in the bottom half section will be displayed in “q”.

If you select **Watt Hours**, the measured value in the bottom half section will be displayed in “WP”.

Select integrator measurement parameter

8. Press down arrow key to move to the bottom half section where measured values are displayed.

9. Press **Enter** button to enter the 1st minor parameter followed by using up and down arrow keys to switch to preferred measurement parameter. Press **Enter** button again to confirm the selection.

Press left or right arrow keys to move to the 2nd minor parameter followed by using the steps above to select a preferred parameter.

## Introduction to integrator parameters

| Parameter name | Description |
|----------------|-------------|
|----------------|-------------|

|      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Mode | <ul style="list-style-type: none"> <li> <b>Standard</b><br/>           It allows user to define a period of Set Time for integrator measurement, which ranges from 1 second to 9999 hours, 59 minutes and 59 seconds.         </li> <li> <b>Manual</b><br/>           User is not able to define a Set Time. The integrator measurement will be running constantly till Stop button is pressed by user.         </li> <li> <b>Continuous</b><br/>           Partly identical with the Standard mode, the integrator measurement runs for a cycle of the Set Time and repeats the cycle indefinitely until Stop button is pressed by user.         </li> </ul> |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|          |                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Function | <ul style="list-style-type: none"> <li> <b>Watt Hours</b><br/>           WP: Total power<br/>           WP+: Positive total power<br/>           WP-: Negative total power<br/>           P(avg): Average power         </li> <li> <b>Ampere Hours</b><br/>           q: Total mAh<br/>           q+: Positive total mAh<br/>           q-: Negative total mAh<br/>           q(avg): Average current         </li> </ul> |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|           |                                                           |
|-----------|-----------------------------------------------------------|
| Test time | It indicates that elapsed time of integrator measurement. |
|-----------|-----------------------------------------------------------|

**Set time** It indicates the time of integrator measurement to be set. It can be set from 1 second to 9999 hours, 59 minutes and 59 seconds.

**State**

- **Running**  
Integrator measurement is in progress.
- **Stop**  
Integrator measurement has been stopped manually.
- **Timeout**  
The time for running integrator measurement is up.
- **Reset**  
The integrator measurement status is cleared.

Measured value  
parameters

**For Watt Hours**

Positive total power: **WP+**

Negative total power: **WP-**

Average power: **P(avg)**

Voltage: **Vdc** (DC voltage), **Vac** (AC voltage),

**Vrms** (AC+DC voltage), **Vmn** (Voltage mean)

Current: **Idc** (DC current), **Iac** (AC current), **Irms**  
(AC+DC current)

**For Ampere Hours**

Total mAh: **q**

Positive total mAh: **q+**

Negative total mAh: **q-**

Average Current : **q(avg)**

Voltage: **Vdc** (DC voltage), **Vac** (AC voltage),

**Vrms** (AC+DC voltage), **Vmn** (Voltage mean)

Current: **Idc** (DC current), **Iac** (AC current), **Irms**  
(AC+DC current)

## Using the integrator function

Manual mode

1. In manual mode, you can directly press the **Start** button in the front panel to start integrator function.

Start

2. To stop integration function, press the **Stop** button in the front panel.

Stop

3. Press the **Reset** button in the front panel to clear integrator.

Reset

- Standard mode
1. Set integrator measurement time before using integrator function.
  2. Other steps are same as running in manual mode.

When integrator performing, the test time will increase until the setting integrator measurement time.

- Continuous mode
1. Set integrator measurement time before using integrator function.
  2. Other steps are same as running in manual mode.

When integrator performing, the test time will increase until the setting integrator measurement time (a cycle) and repeat the cycle indefinitely until the Stop button is pressed by user.

Note

- In the integration process, select the **Measure** key and press **Enter** button to return main measurement screen. Select **Integrator** key and press **Enter** button to switch back to integration measurement screen.
- In the integration process, you can Not change measurement range and enter system to set measurement parameters.
- In the integration process, if the voltage or current measurement value exceeds, the measured value will display in red. However, it will not turn out red color when Auto Range is activated.

## Graph measurement function

The GPM-8310 provides the professional graph measurement function via which user can have a well grip over fluctuations of measured values in waveform and harmonic in bar and list graphs in a friendly user interface. It is available, under the graph mode, to adjust both voltage and current ranges in real time and change the display modes along with relevant parameters with ease.

### Setting up waveform graph measurement

Steps

1. Use left and right arrow keys on the front panel to select **Graph** function key.

2. Press **Enter** button to enter the Waveform graph display screen in which the measured values are displayed in distinctive waveforms.

3. Press right arrow key to move cursor to **Set** key.

Select waveform display mode

4. Press **Enter** button to enter waveform setting section.

5. Press **Enter** button to enter **Display** field. Use up and down arrow keys to toggle between options. Press **Enter** button again to confirm your selection.

|                |                                                                                                                                                                                          |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Option         | <b>V, I, P</b> Three items including the measured voltage, current and power are displayed in waveforms of different colors (V: yellow, I: red, Power: green) within the waveform chart. |
|                | <b>V, I</b> Two items including the measured voltage and current are displayed in waveforms of different colors (V: yellow, I: red) within the waveform chart.                           |
|                | <b>V</b> Only the measured voltage in the waveform of yellow color is displayed within the chart.                                                                                        |
|                | <b>I</b> Only the measured current in the waveform of red color is displayed within the chart.                                                                                           |
|                | <b>P</b> Only the measured power in the waveform of green color is displayed within the chart.                                                                                           |
| Default option | <b>V, I, P</b>                                                                                                                                                                           |

- Select waveform display time division
6. Press down arrow key to move to **Time Div** field in the waveform setting section.

7. Press **Enter** button to enter **Time Div** field. Use up and down arrow keys to toggle between options. Press **Enter** button again to confirm your selection.

|        |                                                                                             |                                                                                                                                                                                                                                                                                              |
|--------|---------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Option | 25us, 50us, 100us, 250us, 500us, 1ms, 2.5ms, 5ms, 10ms, 25ms, 50ms, 100ms, 250ms, 500ms, 1s | The diversified time units allow user to customize a preferred waveform graph display. In theory, shorter the measured period, smaller the time unit is fitting. In contrast, longer the measured period, greater the time unit is suitable. Select a proper option per varied measurements. |
|--------|---------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|                |     |
|----------------|-----|
| Default option | 5ms |
|----------------|-----|

Note

The available options for Time Div vary per set Update Time. Refer to page 108 for correlations.

- Select waveform display sync source
8. Press right arrow key to move to **Sync** field in the waveform setting section.

9. Press **Enter** button to enter **Sync** field. Use up and down arrow keys to toggle between options. Press **Enter** button again to confirm your selection.

|        |            |                                                                               |
|--------|------------|-------------------------------------------------------------------------------|
| Option | <b>V</b>   | Select the voltage of signals as synchronization source.                      |
|        | <b>I</b>   | Select the current of signals as synchronization source.                      |
|        | <b>Off</b> | Select the entire interval of data updating period as synchronization source. |

Default option **V**

- Select waveform display zoom magnification 10. Press right arrow key to move to **Zoom (V)** field in the waveform setting section.

11. Press **Enter** button to enter **Zoom (V)** field. Use up and down arrow keys to toggle between options. Press **Enter** button again to confirm your selection.

Option

- 1, 2, 3** The varied zoom magnifications allow user to customize a preferred waveform graph display. In theory, narrower the measured value, greater the zoom magnification is suitable. In contrast, wider the measured value, smaller the zoom magnification is fitting. The 1 stands for the standard magnification and the 3 represents the highest zoom magnification.

Default option

**1**

**Zoom 1:**

**Zoom 3:**

Frequency over limit

When frequency of either voltage or current is beyond the limit, which varies per set Time Div, the warning message in the upper-right corner will be shown to alarm user as the figures below.

**F\_V\_O:**  
Frequency  
Voltage  
Over

**F\_I\_O:**  
Frequency  
Current  
Over

**F\_V\_I\_O:**  
Frequency  
Voltage &  
Current  
Over

Correlation of  
Limit Frequency,  
Time Div and  
Update Time

Take few examples below that derive from the table above for further descriptions.

- When Update Time is set 20s, the range of Time Div is from 5ms to 1s and the available Frequency is up to 50Hz.
- When Update Time is set 0.1s, the range of Time Div is from 25us to 5ms and the available Frequency is up to 10kHz.

Note

- The maximum frequency for Graph mode is up to 10kHz.
- When the measured frequency of either voltage (VHz) or current (IHz) surpasses the available frequency, which is based on the set Time Div, the warning message will be shown accordingly.

## Setting up waveform graph parameter

### Steps

1. Use left and right arrow keys on the front panel to select **Graph** function key.

2. Press **Enter** button to enter the Waveform graph display screen.

3. Press right arrow key to move cursor to **Parameter** key.

4. Press **Enter** button to enter parameters setting section.

5. Press **Enter** button to enter the 1st parameter. Use up and down arrow keys to toggle between options. Press **Enter** button again to confirm your selection.

6. Press down arrow key to move cursor to the 2nd parameter and repeat the above steps to set up. Also, repeat the same steps for the 3rd and 4th parameters.

|                |                                                                                     |                                                                                  |
|----------------|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------|
| Option         | Voltage                                                                             | <b>Vac</b> (AC)<br><b>Vdc</b> (DC)<br><b>Vrms</b> (AC+DC)<br><b>Vmn</b> (V-MEAN) |
|                | Current                                                                             | <b>Iac</b> (AC)<br><b>Idc</b> (DC)<br><b>Irms</b> (AC+DC, V-MEAN)                |
|                | Active Power                                                                        | <b>P</b>                                                                         |
|                | Apparent Power                                                                      | <b>VA</b>                                                                        |
|                | Reactive power                                                                      | <b>VAR</b>                                                                       |
|                | Power Factor                                                                        | <b>PF</b>                                                                        |

## Setting up Harmonics bar graph measurement

### Steps

1. Use left and right arrow keys on the front panel to select **Graph** function key.

2. Press **Enter** button to enter the Waveform graph display screen.

3. Press **Enter** button to enter Harmonics bar graph display screen where measured values of each harmonic order are shown in the histogram-like bar display.

4. Press right arrow key to move cursor to **Set** key.

5. Press **Enter** button to enter harmonics bar setting section.

- Select harmonics display mode
6. Press **Enter** button to enter **Display Mode** field. Use up and down arrow keys to toggle between options. Press **Enter** button again to confirm your selection.

- |        |   |                                                                                                                           |
|--------|---|---------------------------------------------------------------------------------------------------------------------------|
| Option | V | The THDV measured factor will be displayed in the right-side section in yellow and also shown in the left-side bar graph. |
|        | I | The THDI measured factor will be displayed in the right-side section in yellow and also shown in the left-side bar graph. |

Default option V

- Select harmonics display order number
7. Press down arrow key to move to **Order No.** field in the harmonics setting section.

8. Press **Enter** button to enter **Order No.** field. Use up and down arrow keys to toggle between options. Press Enter button again to confirm your selection.

- |        |                                                                                                                                                                                                                                                   |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Option | <b>1 - 50</b> Select a measured harmonic order with related values to be displayed in both the right-side section in green and the left-side bar graph. Note that the upper limit of order number is relevant to the Harmonics setting (page 38). |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Default option **1**

## Setting up Harmonics list graph measurement

1. Use left and right arrow keys on the front panel to select **Graph** function key.

2. Press **Enter** button to enter the Waveform graph display screen.

3. Press **Enter** button to enter Harmonics bar graph display screen.

4. Press right arrow key to move cursor to **List** key.

- Press **Enter** button to enter harmonics list display screen.

# Digital I/O / DA4 Overview

**Background**      The digital I/O /DA4 port contains up to 3 modes: External Remote Control, DA4 Output Function and User-defined output function, which is divided into User Mode and 4094 Mode individually.

Use the external I/O connector on the rear panel to control the instrument remotely and produce D/A output.

By providing separate VCC power for the terminal, the outputs can also be used as a power source for TTL and CMOS circuits.

**Pin Assignment**      Connector type: SCSI 26 pin female

| Pin No. | Signal Name        | Pin No. | Signal Name     |
|---------|--------------------|---------|-----------------|
| 1       | Digital GND        | 14      | /Ext Trigger In |
| 2       | /Ext Hold In       | 15      | /Ext Stop In    |
| 3       | /Ext Start In      | 16      | /Integ Busy Out |
| 4       | /Ext Reset In      | 17      | +5Vcc Out       |
| 5       | Flyback Diode      | 18      | Out1/Clock      |
| 6       | Out2/Output Enable | 19      | Out3/Strobe     |

|    |                   |    |               |
|----|-------------------|----|---------------|
| 7  | Out4/Serial Input | 20 | Digital GND   |
| 8  | No connection     | 21 | Digital GND   |
| 9  | No connection     | 22 | D/A ch4 out   |
| 10 | D/A ch3 out       | 23 | D/A ch2 out   |
| 11 | D/A ch1 out       | 24 | D/A GND       |
| 12 | D/A GND           | 25 | No connection |
| 13 | D/A GND           | 26 | No connection |

Note

The Digital GND and D/A GND signals are connected internally.

CAUTION

1. Do not apply voltage outside the range of 0 to 5 V to the remote control input pins. Also, do not short the output pins or apply external voltage to them. If you do, the instrument may malfunction.
2. Do not short the D/A output terminal or apply external voltage to it. If you do, the instrument may malfunction.
3. When connecting the D/A output to another device, do not connect the wrong signal pin. Doing so may damage this instrument or the connected instrument.
4. Pin17: VCC output, 5V. It serves as the unregulated max power source for the external device/logic. The maximum current is 100mA.
5. Pin5: Flyback Diode. It connects to VCC or External power source.

## External Remote Control

**Overview** Through external control, you can hold values, perform single measurements, and start, stop, and reset integration.

**Remote Control  
IO Circuit**

**Input diagram**

**Output diagram**

**Pulse width  
timing**

**Start, Stop, Reset, hold,  
Trigger**

**Integ Busy Out**

**Note**

The Integ Busy output signal is set to low level during integration. Use this signal when you are observing integration.

## DA4 Output Function

**Overview** You can output voltage, current, active power, apparent power, reactive power, power factor, phase angle, frequency, voltage peak, current peak, and integrated values using a  $\pm 5\text{V}$  FS DC voltage.

The output range mode and maximum/minimum value of manual range mode can only be used when using a remote control interface. Likewise this parameter can only be configured via remote control. Please see the commands on page 156 for full usage details.

**Output Format** You can select a preconfigured output format or configure your own original format.

| Preconfigured Format | Normal |     | Integrator |
|----------------------|--------|-----|------------|
|                      | Ch1    | V   | P          |
|                      | Ch2    | I   | WP         |
|                      | Ch3    | P   | q          |
|                      | Ch4    | VHz | VHz        |

**Rated Integration Time** In the D/A output of integrated values, 5.0 V FS represents the integrated value when the rated range value is applied for the rated integration time. The default setting is 1.00.00 (1 h, 0 min, 0 s).

If you set the rated integration time to 0.00.00, the D/A output value will be 0 V.

**Output Range Mode** The DA4 have two output range mode: Fixed range mode or Manual range mode. The default setting is Fixed.

**Fixed (Fixed range mode)** When a measurement function's rated value is received, +5V is output.

Manual (Manual range mode)

You can set which measurement function values result in a D/A output of -5V, and which result in a D/A output of +5V. By doing so, you can enlarge or reduce (zoom) the D/A output of each channel.

For example, if you are measuring a current that fluctuates between 0.4A and 0.6A with a measurement range of 1A, when the D/A output range mode is Fixed, the D/A output voltage will fluctuate between 2.0V and 3.0V. When you want to observe the fluctuations more closely, you can use the D/A zoom feature. If you set the D/A output range mode to Manual and set the minimum value to 0.4 and the maximum value to 0.6, the instrument will produce -5V when the measured current value is 0.4A and +5V when the measured current value is 0.6A.

Compare (Comparator Mode)

By comparing with the comparator limits, this instrument outputs +5 V, 0 V, or -5 V.

- Below the lower limit: -5 V output
- Greater than or equal to the lower limit and less than the upper limit: 0 V output
- Greater than or equal to the upper limit: +5 V output

Maximum and Minimum Values in Manual Range Mode and Comparator Mode

The value maximum and minimum is between - 9.999E+12 and 9.999E+12.

The default value is 100.0 and -100.0.

Relationship between Output Items and D/A Output Voltage

Frequency

Integrator

Other

Examples of D/A  
Output

**Voltage:**

When the voltage range is set to 150 V and measurement value is 100 V, the output is  $100 \text{ V}/150 \text{ V} \times 5 \text{ V} = 3.3 \text{ V}$ .

---

**Frequency:**

When the voltage frequency measurement value is 60Hz, the D/A output is  $60 \text{ Hz}/100 \text{ Hz} \times 5 \text{ V} = 3 \text{ V}$ .

---

**Power:**

When the voltage range is set to 150 V and the current range is set to 2 A, the rated power range is  $150 \text{ V} \times 2 \text{ A} = 300 \text{ W}$ .

When the measured power value is 150 W, the output is  $150 \text{ W}/300 \text{ W} \times 5 \text{ V} = 2.5 \text{ V}$ .

---

**Integrated Power:**

When the voltage range is set to 150 V and the current range is set to 1 A, the rated power range is  $150 \text{ V} \times 1 \text{ A} = 150 \text{ W}$ . In manual integration mode, when the rated integration time is set to 1 hour, the rated electrical energy value is  $150 \text{ W} \times 1 \text{ h} = 150 \text{ Wh}$ .

If you perform integration for 1 hour and the measured electrical energy is 150 W, the D/A output one hour after integration start is +5 V.

---

Note

1. The range between +5 to +7 V and -5 to -7 V is not output for  $\lambda$  and  $\Phi$ . When an error occurs, the output is approximately  $\pm 7.5 \text{ V}$ .
2. For Vpk and Ipk,  $\pm 5 \text{ V}$  represents the application of 3 times the rated range value (6 times the rated range value when the crest factor is 6 or 6A).
3. Refer to the table below for GPM-8310 DA parameters calculation.

| Item | Calculation                                          | Note                                                                                                                                               |
|------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| V    | $(X / V\_range) * 5V$                                |                                                                                                                                                    |

\*Variable Definition: X = measured value

## User / 4094 Mode

**Overview** User (IO) and 4094 mode can only be used when using a remote control interface. Likewise this mode can only be enabled or disabled via remote control. Please see the digital I/O commands on page 159 for full usage details.

**Digital IO wiring diagram** Pin 6, 7, 18, 19

**Related Commands**

- AOUTput:DIGital:MODE?
- AOUTput:DIGital:MODE {IO|4094}
- AOUTput:DIGital:SETup (For User Mode)
- AOUTput:DIGital:OUTPut (For 4094 Mode)

## User Mode IO (Output) Mode

**Overview** It is the mode utilizing output as general IO (Output) usage with up to 4 pins available for use simultaneously. Refer to the following introductions along with diagrams for more details. Please see the digital I/O commands on page 159 for full usage details.

**Related Commands** AOUT:DIG:MODE IO (switch to IO mode)  
 AOUT:DIG:SET 0,1,1,0  
 => OUT1(Pin18) : +0V  
 OUT2(Pin6) : +5V  
 OUT3(Pin19) : +5V  
 OUT4(Pin7) : +0V

**Pin Diagram** Use the built-in power supply

Use in conjunction with the logic gate

## User Mode - Switch Mode (LED)

**Overview** It is the mode driving LED as status display for user with up to 4 pins available for use simultaneously. Refer to the following introductions along with diagrams for more details. Please see the digital I/O commands on page 159 for full usage details.

**Related Commands** AOUT:DIG:MODE IO (switch to IO mode)  
 AOUT:DIG:SET 1,0,0,1  
 => OUT1(Pin18) : LED OFF  
 OUT2(Pin6) : LED ON  
 OUT3(Pin19) : LED ON  
 OUT4(Pin7) : LED OFF

**Pin Diagram** Use the built-in power supply

Use the external power

## User Mode - Switch Mode (Relay)

**Overview** It is the mode driving Relay to control external circuit with up to 4 pins available for use simultaneously. Refer to the following introductions along with diagrams for more details. Please see the digital I/O commands on page 159 for full usage details.

**Related Commands** AOUT:DIG:MODE IO (switch to IO mode)  
AOUT:DIG:SET 1,0,1,0  
=> OUT1(Pin18) : RELAY ON  
OUT2(Pin6) : RELAY OFF  
OUT3(Pin19) : RELAY ON  
OUT4(Pin7) : RELAY OFF

**Pin Diagram** Use the built-in power supply which provides the power of maximum 100mA

Use the external power (+5~24V) (Maximum  $I_{ds}$  of each channel: 100mA)

## 4094 Mode

---

**Overview** It is the mode for IO expansion via converting serial data into parallel data. Up to 8 pins are available simultaneously when single 4094 is in operation, whereas it rises to the maximum of 16 pins available simultaneously if putting two 4094 in series. Refer to the following introductions along with diagrams for more details. Please see the digital I/O commands on page 159 for full usage details.

---

**Related Commands** AOOUT:DIG:MODE 4094 (switch to 4094 mode)

**4094 x 1 (8 Pin)**

AOOUT:DIG:OUTP 10 , 1

=> 4094 Output(Out1~Out8) : 01010000

**4094 x 2 (16 Pin)**

AOOUT:DIG:OUTP 22,0

AOOUT:DIG:OUTP 88,1

=> 4094 Output(Out1~Out8) : 01101000

(Out9~Out16): 00011010

---

**Note:** 0=> output is Low (+0V)

1=> output is High (+5V)

---

# Configure Remote Control Interface

## Configure USB Interface

|               |                                                                                                                                                                                                                                                                                 |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USB CDC Class | Due to the USB port configured to CDC (Communications Device Class) by default, the GPM-8310 will appear as a virtual COM port to a connected PC. Before, hence, using remote control via CDC USB class, install the appropriate CDC USB driver included on the User Manual CD. |
| Background    | Continue the following setting from <b>SYSTEM CONFIG</b> setting screen                                                                                                                                                                                                         |

|       |                                                                   |                                                                                    |
|-------|-------------------------------------------------------------------|------------------------------------------------------------------------------------|
| Steps | 1. Press <b>Enter</b> button.                                     |   |
|       | 2. Press down arrow key to move cursor to <b>I/O Model</b> field. |   |
|       | 3. Use soft keys to select and confirm the <b>USB</b> option.     |  |

|                   |                       |                                   |
|-------------------|-----------------------|-----------------------------------|
| USB Configuration | PC connector          | Type A, host                      |
|                   | GPM-8310 connector    | Rear panel Type B, slave          |
|                   | Speed                 | 1.1/2.0 (full speed/high speed)   |
|                   | USB Class             | CDC (Communications device class) |
|                   | Hardware flow control | Off                               |
|                   | Data Bits             | 8                                 |
|                   | Stop bit              | 1                                 |

## Configure RS232 Interface

|               |                                                                                     |                                                                                   |
|---------------|-------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| Background    | Continue the following setting from <b>SYSTEM CONFIG</b> setting screen             |                                                                                   |
| Steps         | 1. Press <b>Enter</b> button.                                                       |  |
|               | 2. Press down arrow key to move cursor to <b>I/O Model</b> field.                   |  |
|               | 3. Use soft keys to select and confirm the <b>RS232</b> option.                     |  |
|               |    |                                                                                   |
|               | 4. Press down arrow key to move cursor to <b>Baud Rate</b> field.                   |  |
|               | 5. Use soft keys to select and confirm the <b>Baud Rate</b> option.                 |                                                                                   |
|               |  |                                                                                   |
| Option        | 9600, 19200, 38400, 57600, 115200                                                   |                                                                                   |
| Default value | 9600                                                                                |                                                                                   |

- 6. Press down arrow key to move cursor to **Terminator** field.
- 7. Use soft keys to select and confirm the **Terminator** option.

|        |               |                                                          |
|--------|---------------|----------------------------------------------------------|
| Option | CR, LF, CR+LF | Terminator indicates the end of line for return message. |
|--------|---------------|----------------------------------------------------------|

|               |       |
|---------------|-------|
| Default value | CR+LF |
|---------------|-------|

|                     |                       |                                   |
|---------------------|-----------------------|-----------------------------------|

| Option         | The range of Socket Port is from 00000 to 65535.                                                                                                                                                                                                                                                               |                                                                                                                                                                                             |
| Default option | 00023                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                             |
| Steps          | <div>8. When selecting Manual for IP Model, press down arrow key to move cursor to <b>IP Address, Subnet Mask</b> and <b>Gateway</b> fields, individually.</div> <div>9. Use soft keys to increase or decrease the parameters of <b>IP Address, Subnet Mask</b> and <b>Gateway</b> fields, individually.</div> | <div></div> <div></div> |
| Default option | IP Address: 192.168.0.100<br>Subnet Mask: 255.255.255.0<br>Gateway: 192.168.0.1                                                                                                                                                                                                                                |                                                                                                                                                                                             |

## Configure EOL Character

---

|             |                                                                                                                                                         |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description | The system config menu can set the EOL(end-of-line) character for return message.<br><b>(The USB, GPIB and LAN's EOL character is fixed with CR+LF)</b> |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|

The EOL characters that can be received from the PC include CR+LF, LF+CR, CR or LF. The most common EOL character is CR+LF.

## Return to Local Control

---

|            |                                                                                                                                                                                 |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Background | When the unit is in remote control mode, the RMT icon above the main display can be seen. When this icon is not displayed, it indicates that the unit is in local control mode. |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

---

|           |                                                                                                                                                                                     |
|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Procedure | <ol style="list-style-type: none"><li>1. Press the <b>Local</b> key when in remote mode.</li><li>2. The unit will go back into local mode and the RMT icon will turn off.</li></ol> |
|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

# COMMAND OVERVIEW

The Command overview chapter lists all programming commands in functional order as well as alphabetical order. The command syntax section shows you the basic syntax rules you have to apply when using commands.

## Command Syntax

|                     |                                                                                                                                                                                                                                                                                                                                                                                            |                       |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| Compatible Standard | IEEE488.2                                                                                                                                                                                                                                                                                                                                                                                  | Partial compatibility |
|                     | SCPI, 1994                                                                                                                                                                                                                                                                                                                                                                                 | Partial compatibility |
| Command Structure   | SCPI (Standard Commands for Programmable Instruments) commands follow a tree-like structure, organized into nodes. Each level of the command tree is a node. Each keyword in a SCPI command represents each node in the command tree. Each keyword (node) of a SCPI command is separated by a colon (:). For example, the diagram below shows an SCPI sub-structure and a command example. |                       |

|               |                                                                                                                                                                                  |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Command Types | There are a number of different instrument commands and queries. A command sends instructions or data to the unit and a query receives data or status information from the unit. |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|                 |                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Command types   |                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Simple          | A single command with/without a parameter                                                                                                                                                                                                                                                                                                                                                                                         |
| Example         | :INPut:MODE DC                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Query           | A query is a simple or compound command followed by a question mark (?). A parameter (data) is returned.                                                                                                                                                                                                                                                                                                                          |
| Example         | :INPut:CFACtor?                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Command Forms   | <p>Commands and queries have two different forms, long and short. The command syntax is written with the short form of the command in capitals and the remainder (long form) in lower case.</p> <p>The commands can be written either in capitals or lower-case, just so long as the short or long forms are complete. An incomplete command will not be recognized.</p> <p>Below are examples of correctly written commands.</p> |
|                 | <p>Long form      :INPut:SYNChronize VOLTage</p> <p>                  :COMMunicate:HEADer ON</p>                                                                                                                                                                                                                                                                                                                                  |
|                 | <p>Short form     :INP:SYNC VOLT</p> <p>                  :COMM:HEAD ON</p>                                                                                                                                                                                                                                                                                                                                                       |
| Square Brackets | <p>Commands that contain square brackets indicate that the contents are optional. The function of the command is the same with or without the square bracketed items, as shown below. For example, for the query:</p> <p>[ :INPut]:FILTer?</p> <p>Both :INPut:FILTer? and :FILTer? are valid forms.</p>                                                                                                                           |

1. Command header
2. Space
3. Parameter 1

| Common Input Parameters | Type                          | Description                                                                                                                                                                                                                                     | Example         |
|-------------------------|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
|                         | <Boolean>                     | boolean logic                                                                                                                                                                                                                                   | 0, 1            |
|                         | <NR1>                         | integers                                                                                                                                                                                                                                        | 0, 1, 2, 3      |
|                         | <NR2>                         | decimal numbers                                                                                                                                                                                                                                 | 0.1, 3.14, 8.5  |
|                         | <NR3>                         | floating point with exponent                                                                                                                                                                                                                    | 4.5e-1, 8.25e+1 |
|                         | <NRf>                         | any of NR1, 2, 3                                                                                                                                                                                                                                | 1, 1.5, 4.5e-1  |
|                         | [MIN]<br>(Optional parameter) | For commands, this will set the setting to the lowest value. This parameter can be used in place of any numerical parameter where indicated.<br><br>For queries, it will return the lowest possible value allowed for the particular setting.   |                 |
|                         | [MAX]<br>(Optional parameter) | For commands, this will set the setting to the highest value. This parameter can be used in place of any numerical parameter where indicated.<br><br>For queries, it will return the highest possible value allowed for the particular setting. |                 |

**Message Terminator (EOL)**      **Remote Command**      Marks the end of a command line. The following messages are in accordance with IEEE488.2 standard.

|                   |                      |                                        |
|-------------------|----------------------|----------------------------------------|
|                   | CR+LF                | The most common EOL character is CR+LF |
| Message Separator | EOL or ; (semicolon) | Command Separator                      |

## Command List

|               |                                    |     |

| Example          | *OPT?<br>->C1,C2,C3,C7,EX1,EX2,G5,DA4 |                                                                                                                                                                                                             |

**\*RST**

Set →

|             |                          |  |
|-------------|--------------------------|--|
| Description | Initializes the settings |  |
| Syntax      | *RST                     |  |

**\*SRE**

Set →

→ Query

|                                |                                                        |       |
|--------------------------------|--------------------------------------------------------|-------|
| Description                    | Sets or returns SRER (Service Request Enable Register) |       |
| Syntax                         | *SRE <NR1>                                             |       |
| Query Syntax                   | *SRE?                                                  |       |
| Parameter/<br>Return parameter | <NR1>                                                  | 0~255 |

Example      \*SER 7  
                 Set the the SRER to 00000111  
                 \*SRE?  
                 ->3  
                 SRER=00000011

## \*STB

→ Query

Description      Returns the SBR (Status Byte Register) contents.

Query Syntax      \*STB?

Return parameter      <NR1>      0~255

Example      \*STB ?  
                 ->34  
                 SBR=00100010

## \*TRG

Set →

Description      Executes single measurement (the same operation as when Trigger is pressed).

Syntax      \*TRG

## AOUTput Commands

|                                    |     |
|------------------------------------|-----|
| :AOUTput.....                      | 156 |
| :AOUTput[:NORMal]:CHANnel<x> ..... | 156 |
| :AOUTput[:NORMal]:IRTime .....     | 157 |
| :AOUTput[:NORMal]:MODE<x>.....     | 157 |
| :AOUTput[:NORMal]:PRESet .....     | 158 |
| :AOUTput[:NORMal]:RATE<x> .....    | 158 |
| :AOUTput:DIGital:MODE .....        | 159 |
| :AOUTput:DIGital:OUTPut .....      | 159 |
| :AOUTput:DIGital:SETup .....       | 160 |

### :AOUTput

→ Query

Description Returns all D/A output settings.

Query Syntax :AOUTput?

Return parameter <String>

### :AOUTput[:NORMal]:CHANnel<x>

Set →

→ Query

Description Sets or returns a D/A output item.

Syntax :AOUTput[:NORMal]:CHANnel<X>  
{<Function>[,<Element>]}

Query Syntax :AOUTput[:NORMal]:CHANnel<X>?

|                  |            |                                                                                                    |
|------------------|------------|----------------------------------------------------------------------------------------------------|
| Parameter/       | <x>        | 1 to 4 (channel)                                                                                   |
| Return parameter | <Function> | U I P S Q LAMBda PHI UPeak IPeak FU FI WH WHP WHM AH AHP AHM NONE                                  |
|                  | <Element>  | 1 (If <Element> is omitted, the element is set to 1) ( For the GPM-8310, only set to 1 or omitted) |

Example :AOUTPUT:NORMAL:CHANNEL1 NONE  
Turns D/A channel1 output off (0V)  
:AOUTPUT:NORMAL:CHANNEL1?  
->:AOUTPUT:NORMAL:CHANNEL1 1,1

:AOUTput[:NORMAL]:IRTime

Set →

→ Query

Description Sets or returns the rated integration time that is used in the D/A output of the integrated value.

Syntax :AOUTput[:NORMAL]:IRTime {<NRf>,<NRf>,<NRf>}

Query Syntax :AOUTput[:NORMAL]:IRTime?

Parameter/ 1st <NRf> 0~9999(hour)

Return parameter 2nd <NRf> 0~59(minute)

3rd <NRf> 0~59(second)

Example :AOUTPUT:NORMAL:IRTIME 1,1,10  
:AOUTPUT:NORMAL:IRTIME?  
->:AOUTPUT:NORMAL:IRTIME 1,1,10

:AOUTput[:NORMAL]:MODE<x>

Set →

→ Query

Description Sets or returns a D/A range mode. (Remote Control Only)

Syntax :AOUTput[:NORMAL]:MODE<x>  
{FIXed|MANual|COMPar}

Query Syntax :AOUTput[:NORMAL]:MODE<x>?

|                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                    |
|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| Parameter/       | <x>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 1 to 4 (channel)   |
| Return parameter | FIXed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Fixed range mode.  |
|                  | MANual                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Manual range mode. |
|                  | COMPare                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Comparator mode.   |
| Example          | :AOUTPUT:NORMAL:MODE1 FIXED<br>:AOUTPUT:NORMAL:MODE1?<br>->:AOUTPUT:NORMAL:MODE1 FIXED                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                    |
| Note             | <ul style="list-style-type: none"> <li>• FIXed = Fixed range mode (default value)<br/>Outputs +5 V when the rated value of each measurement function is received.</li> <li>• MANual = Manual range mode<br/>The displayed values of the measurement function when +5 V and -5 V are output as D/A output can be set to any values of your choice. This enables the D/A output to be expanded or reduced for each channel (D/A zoom).</li> <li>• COMPare = Comparator mode<br/>By comparing with the comparator limits, this instrument outputs +5 V, 0 V, or -5 V.</li> </ul> |                    |

:AOUTput[:NORMAl]:PRESet

|             |                                                    |                                    |
|-------------|----------------------------------------------------|------------------------------------|
| Description | Sets the D/A output items to their default values. |                                    |
| Syntax      | :AOUTput[:NORMAl]:PRESet {NORMAl INTEGrate}        |                                    |
| Parameter   | NORMAl                                             | Sets CH1:U, CH2:I, CH3:P, CH4:FU   |
|             | INTEGrate                                          | Sets CH1:P, CH2:WH, CH3:AH, CH4:FU |
| Example     | :AOUTPUT:NORAML:PRESET NORMAL                      |                                    |

:AOUTput[:NORMAl]:RATE<x>

|             |                                                                                                                       |
|-------------|-----------------------------------------------------------------------------------------------------------------------|
| Description | Sets or returns the maximum and minimum values for when the D/A output is in manual range mode. (Remote Control Only) |
|-------------|-----------------------------------------------------------------------------------------------------------------------|

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                          |                                          |

|                  |                                                                                                                  |                             |
|------------------|------------------------------------------------------------------------------------------------------------------|-----------------------------|
| Description      | Sets or returns the on/off state of the output hold feature for display, communication, and other types of data. |                             |
| Syntax           | :HOLD {<Boolean> OFF ON}                                                                                         |                             |
| Query Syntax     | :HOLD?                                                                                                           |                             |
| Parameter        | <Boolean>0                                                                                                       | OFF                         |
|                  | <Boolean>1                                                                                                       | ON                          |
| Return parameter | 0                                                                                                                | Turn the hold function off. |
|                  | 1                                                                                                                | Turn the hold function on.  |
| Example          | :HOLD OFF                                                                                                        |                             |
|                  | :HOLD?                                                                                                           |                             |
|                  | ->:HOLD 0                                                                                                        |                             |

## INPut Commands

---

|                                                   |     |
|---------------------------------------------------|-----|
| :INPut .....                                      | 174 |
| [:INPut]:WIRing .....                             | 174 |
| [:INPut]:MODE .....                               | 175 |
| [:INPut]:VOLTage .....                            | 175 |
| [:INPut]:VOLTage:RANGe .....                      | 175 |
| [:INPut]:VOLTage:AUTO .....                       | 176 |
| [:INPut]:VOLTage:CONFig .....                     | 176 |
| [:INPut]:VOLTage:POJump .....                     | 177 |
| [:INPut]:CURRent .....                            | 177 |
| [:INPut]:CURRent:RANGe .....                      | 177 |
| [:INPut]:CURRent:AUTO .....                       | 178 |
| [:INPut]:CURRent:CONFig .....                     | 179 |
| [:INPut]:CURRent:POJump .....                     | 179 |

| [:INPut]:ZERO .....                               | 186 |

:INPut

→ Query

|             |                             |
|-------------|-----------------------------|
| Description | Returns all input settings. |
|-------------|-----------------------------|

|              |         |
|--------------|---------|
| Query Syntax | :INPut? |
|--------------|---------|

|                  |          |
|------------------|----------|
| Return parameter | <String> |
|------------------|----------|

[:INPut]:CFActor

Set →

→ Query

|             |                                   |
|-------------|-----------------------------------|
| Description | Sets or returns the crest factor. |
|-------------|-----------------------------------|

|        |                           |
|--------|---------------------------|
| Syntax | [:INPut]:CFActor {3 6 A6} |
|--------|---------------------------|

|              |                   |
|--------------|-------------------|
| Query Syntax | [:INPut]:CFActor? |
|--------------|-------------------|

|                                |    |                                                    |
|--------------------------------|----|----------------------------------------------------|
| Parameter/<br>Return parameter | 3  | crest factor 3.                                    |
|                                | 6  | crest factor 6.                                    |
|                                | A6 | Display range expand mode (6A) for crest factor 6. |

|         |                    |
|---------|--------------------|
| Example | :INPUT:CFACTOR 3   |
|         | :INPUT:CFACTOR?    |
|         | ->:INPUT:CFACTOR 3 |

Set →

[:INPut]:WIRing

→ Query

|             |                                    |
|-------------|------------------------------------|
| Description | Sets or returns the wiring system. |
|-------------|------------------------------------|

|        |                         |
|--------|-------------------------|
| Syntax | [:INPut]:WIRing {P1W2 } |
|--------|-------------------------|

|              |                  |
|--------------|------------------|
| Query Syntax | [:INPut]:WIRing? |
|--------------|------------------|

|                                |      |                                                                                       |
|--------------------------------|------|---------------------------------------------------------------------------------------|
| Parameter/<br>Return parameter | P1W2 | Single-phase, two-wire system. (For the GPM-8310, the wiring system is fixed to P1W2) |
|--------------------------------|------|---------------------------------------------------------------------------------------|

|         |                      |
|---------|----------------------|
| Example | :INPUT:WIRING P1W2   |
|         | :INPUT:WIRING?       |
|         | ->:INPUT:WIRING P1W2 |

**[[:INPut]:MODE**

|                                |                                                           |                                    |
|--------------------------------|-----------------------------------------------------------|------------------------------------|
| Description                    | Sets or returns the voltage and current measurement mode. |                                    |
| Syntax                         | [:INPut]:MODE {DC AC/RMS ACDC  VMEan}                     |                                    |
| Query Syntax                   | [:INPut]:MODE?                                            |                                    |
| Parameter/<br>Return parameter | DC                                                        | Select the dc measurement mode.    |
|                                | AC/RMS                                                    | Select the ac measurement mode.    |
|                                | ACDC                                                      | Select the acdc measurement mode.  |
|                                | VMEan                                                     | Select the vmean measurement mode. |
| Example                        | :INPUT:MODE DC                                            |                                    |
|                                | :INPUT:MODE?                                              |                                    |
|                                | ->:INPUT:MODE DC                                          |                                    |

**[[:INPut]:VOLTage**

|                  |                                           |  |
|------------------|-------------------------------------------|--|
| Description      | Returns all voltage measurement settings. |  |
| Query Syntax     | [:INPut]:VOLTage?                         |  |
| Return parameter | <String>                                  |  |

**[[:INPut]:VOLTage:RANGe**

|                                |                                    |                                                                       |
|--------------------------------|------------------------------------|-----------------------------------------------------------------------|
| Description                    | Sets or returns the voltage range. |                                                                       |
| Syntax                         | [:INPut]:VOLTage:RANGe {<Voltage>} |                                                                       |
| Query Syntax                   | [:INPut]:VOLTage:RANGe?            |                                                                       |
| Parameter/<br>Return parameter | <Voltage>                          | 15, 30, 60, 150, 300, 600(V) when the crest factor is set to 3.       |
|                                |                                    | 7.5, 15, 30, 75, 150, 300(V) when the crest factor is set to 6 or 6A. |

Example           :INPUT:VOLTAGE:RANGE 600V  
                   :INPUT:VOLTAGE:RANGE?  
                   ->:INPUT:VOLTAGE:RANGE 600.0E+00

### **[:INPut]:VOLTage:AUTO**

Set →

→ Query

Description       Sets or returns the voltage auto range on/off state.

Syntax           [:INPut]:VOLTage:AUTO {<Boolean>|OFF|ON}

Query Syntax     [:INPut]:VOLTage:AUTO?

Parameter       <Boolean>0 OFF  
                   <Boolean>1 ON

Return parameter 0       Turn the voltage auto range function off.  
                   1       Turn the voltage auto range function on.

Example           :INPUT:VOLTAGE:AUTO ON  
                   :INPUT:VOLTAGE:AUTO?  
                   ->:INPUT:VOLTAGE:AUTO 1

### **[:INPut]:VOLTage:CONFig**

Set →

→ Query

Description       Sets or returns the valid voltage range.

Syntax           [:INPut]:VOLTage:CONFig {ALL|<Voltage>[,Voltage]...}

Query Syntax     [:INPut]:VOLTage:CONFig?

Parameter/       ALL       All ranges are valid.  
   Return parameter <Voltage>   See(:INPut:VOLTage:RANGe).

Example           :INPUT:VOLTAGE:CONFIG 300,150,30  
                   :INPUT:VOLTAGE:CONFIG?  
                   ->:INPUT:VOLTAGE:CONFIG 300.0E+00,150.0E+00,  
                   30.0E+00

**[[:INPut]:VOLTage:PO]ump**

|                                |                                                                                                |                                                                  |
|--------------------------------|------------------------------------------------------------------------------------------------|------------------------------------------------------------------|
| Description                    | Sets or returns the jump destination range that is used when a voltage peak over-range occurs. |                                                                  |
| Syntax                         | [:INPut]:VOLTage:PO]ump {OFF <Voltage>}                                                        |                                                                  |
| Query Syntax                   | [:INPut]:VOLTage:PO]ump?                                                                       |                                                                  |
| Parameter/<br>Return parameter | OFF<br><Voltage>                                                                               | No jump destination voltage range.<br>See(:INPut:VOLTage:RANGe). |
| Example                        | :INPUT:VOLTAGE:POJUMP 600V<br>:INPUT:VOLTAGE:POJUMP?<br>->:INPUT:VOLTAGE:POJUMP 600.0E+00      |                                                                  |

**[[:INPut]:CURRent**

|                  |                                           |  |
|------------------|-------------------------------------------|--|
| Description      | Returns all current measurement settings. |  |
| Query Syntax     | [:INPut]:CURRent?                         |  |
| Return parameter | <String>                                  |  |

**[[:INPut]:CURRent:RANGe**

|              |                                                            |  |
|--------------|------------------------------------------------------------|--|
| Description  | Sets or returns the current range.                         |  |
| Query        | [:INPut]:CURRent:RANGe {<Current> (EXTeRnal<x>,<Voltage>)} |  |
| Query Syntax | [:INPut]:CURRent:RANGe?                                    |  |

|                                |                        |                                                                                                    |

Example

```
:INPUT:CURRENT:RANGE 20A
:INPUT:CURRENT:RANGE?
->:INPUT:CURRENT:RANGE 20.0E+00
:INPUT:CURRENT:RANGE EXTERNAL1,10V
:INPUT:CURRENT:RANGE?
-> :INPUT:CURRENT:RANGE EXTERNAL1,10.0E+00
```

## **[:INPut]:CURRent:AUTO**

|                  |                                                      |                                           |
|------------------|------------------------------------------------------|-------------------------------------------|
| Description      | Sets or returns the current auto range on/off state. |                                           |
| Syntax           | [:INPut]:CURRent:AUTO {<Boolean> OFF ON}             |                                           |
| Query Syntax     | [:INPut]:CURRent:AUTO?                               |                                           |
| Parameter        | <Boolean>0                                           | OFF                                       |
|                  | <Boolean>1                                           | ON                                        |
| Return parameter | 0                                                    | Turn the current auto range function off. |
|                  | 1                                                    | Turn the current auto range function on.  |

Example           :INPUT:CURRENT:AUTO ON  
                   :INPUT:CURRENT:AUTO?  
                   ->:INPUT:CURRENT:AUTO 1

### **[[:INPut]:CURRent:CONFig**

Set →

→ Query

Description       Sets or returns the valid current range.

Syntax            [:INPut]:CURRent:CONFig  
                   {ALL|<Current>[,Current]...}

Query Syntax      [:INPut]:CURRent:CONFig?

|                                |           |                            |
|--------------------------------|-----------|----------------------------|
| Parameter/<br>Return parameter | ALL       | All ranges are valid.      |
|                                | <Current> | See(:INPut:CURRent:RANGe). |

Example           :INPUT:CURRENT:CONFIG 20,10,1  
                   :INPUT:CURRENT:CONFIG?  
                   ->:INPUT:CURRENT:CONFIG 20.0E+00,10.0E+00,  
                   1.0E+00

### **[[:INPut]:CURRent:POJump**

Set →

→ Query

Description       Sets or returns the jump destination range that is  
                   used when a current peak over-range occurs.

Syntax            [:INPut]:CURRent:POJump {OFF|<Current>}

Query Syntax      [:INPut]:CURRent:POJump?

|                                |            |                                    |
|--------------------------------|------------|------------------------------------|
| Parameter/<br>Return parameter | OFF        | No jump destination current range. |
|                                | <Current > | See(:INPut:CURRent:RANGe).         |

Example           :INPUT:CURRENT:POJUMP 20A  
                   :INPUT:CURRENT:POJUMP?  
                   ->:INPUT:CURRENT:POJUMP 20.0E+00

**[::INPut]:CURRent:EXTSensor:CONFig<x>**

|                                |                                                                                                                                                       |                                                                            |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| Description                    | Sets or returns the valid external current sensor range.                                                                                              |                                                                            |

| Example                        | :INPUT:SCALIG:VT:SRATIO:ELEMENT1 10                                                    |                                                                                                    |
|                                | :INPUT:SCALIG:VT:SRATIO:ELEMENT1?                                                      |                                                                                                    |
|                                | ->:INPUT:SCALIG:VT:SRATIO:ELEMENT1 10                                                  |                                                                                                    |

[[:INPut]:SYNChronize   

|                                |                                             |                                            |
|--------------------------------|---------------------------------------------|--------------------------------------------|
| Description                    | Sets or returns the synchronization source. |                                            |
| Syntax                         | [:INPut]:SYNChronize {VOLTage CURRent OFF}  |                                            |
| Query Syntax                   | [:INPut]:SYNChronize?                       |                                            |
| Parameter/<br>Return parameter | VOLTage                                     | Select the voltage synchronization source. |
|                                | CURRent                                     | Select the current synchronization source. |
|                                | OFF                                         | Select the off synchronization source.     |

|         |                              |
|---------|------------------------------|
| Example | :INPUT:SYNCHRONIZE VOLTAGE   |
|         | :INPUT:SYNCHRONIZE?          |
|         | ->:INPUT:SYNCHRONIZE VOLTAGE |

### **[[:INPut]:FILTer**

|             |                                    |
|-------------|------------------------------------|
| Description | Returns all input filter settings. |
|-------------|------------------------------------|

|              |                   |
|--------------|-------------------|
| Query Syntax | [[:INPut]:FILTer? |
|--------------|-------------------|

|                  |          |
|------------------|----------|
| Return parameter | <String> |
|------------------|----------|

### **[[:INPut]:FILTer:LINE**

|             |                                  |
|-------------|----------------------------------|
| Description | Sets or returns the line filter. |
|-------------|----------------------------------|

|        |                                          |
|--------|------------------------------------------|
| Syntax | [[:INPut]:FILTer:LINE {<Boolean> OFF ON} |
|--------|------------------------------------------|

|              |                        |
|--------------|------------------------|
| Query Syntax | [[:INPut]:FILTer:LINE? |
|--------------|------------------------|

|           |                |
|-----------|----------------|
| Parameter | <Boolean>0 OFF |
|           | <Boolean>1 ON  |

|                  |   |                                    |
|------------------|---|------------------------------------|
| Return parameter | 0 | Turn the line filter function off. |
|                  | 1 | Turn the line filter function on.  |

|         |                        |
|---------|------------------------|
| Example | :INPUT:FILTer:LINE OFF |
|         | :INPUT:FILTer:LINE?    |
|         | ->:INPUT:FILTer:LINE 0 |

### **[[:INPut]:FILTer:FREQuency**

|             |                                       |
|-------------|---------------------------------------|
| Description | Sets or returns the frequency filter. |
|-------------|---------------------------------------|

|        |                                               |
|--------|-----------------------------------------------|
| Syntax | [[:INPut]:FILTer:FREQuency {<Boolean> OFF ON} |
|--------|-----------------------------------------------|

|              |                             |
|--------------|-----------------------------|
| Query Syntax | [[:INPut]:FILTer:FREQuency? |
|--------------|-----------------------------|

|                  |                              |                                         |
|------------------|------------------------------|-----------------------------------------|
| Parameter        | <Boolean>0                   | OFF                                     |
|                  | <Boolean>1                   | ON                                      |
| Return parameter | 0                            | Turn the frequency filter function off. |
|                  | 1                            | Turn the frequency filter function on.  |
| Example          | :INPUT:FILTER:FREQUECN Y OFF |                                         |
|                  | :INPUT:FILTER:FREQUECN Y?    |                                         |
|                  | ->:INPUT:FILTER:FREQUECN Y 0 |                                         |

### [[:INPut]:POVer

|                  |                                          |                                       |
|------------------|------------------------------------------|---------------------------------------|
| Description      | Returns the peak over-range information. |                                       |
| Query Syntax     | [:INPut]:POVer?                          |                                       |
| Return parameter | Bit0                                     | Voltage peak over-range is occurring. |
|                  | Bit1                                     | Current peak over-range is occurring. |
| Example          | :INPUT:POVER?                            |                                       |
|                  | ->:INPUT:POVER 1                         |                                       |

### [[:INPut]:CRANge

|              |                                         |  |
|--------------|-----------------------------------------|--|
| Description  | Sets or returns the check range status. |  |
| Query Syntax | [:INPut]:CRANge?                        |  |

|                  |      |                                                                      |
|------------------|------|----------------------------------------------------------------------|
| Return parameter | Bit0 | The voltage is at the condition for reducing the auto range or less. |
|                  | Bit1 | The voltage exceeds the condition for raising the auto range.        |
|                  | Bit2 | The voltage is over-range.                                           |
|                  | Bit3 | The voltage is peak over-range.                                      |
|                  | Bit4 | The current is at the condition for reducing the auto range or less. |
|                  | Bit5 | The current exceeds the condition for raising the auto range.        |
|                  | Bit6 | The current is over-range.                                           |
|                  | Bit7 | The current is peak over-range.                                      |

Example      :INPUT:CRANGE?  
                  ->:INPUT:CRANGE 8  
                  (Indicate the voltage is peak over-range)

## **[:INPut]:ZERO**

| Parameter/<br>Return parameter | MANUal                                     | Manual integration mode.     |
|                                | NORMal                                     | Standard integration mode.   |
|                                | CONTInuous                                 | Continuous integration mode. |
| Example                        | :INTEGRATE:MODE MANUAL                     |                              |
|                                | :INTEGRATE:MODE?                           |                              |
|                                | ->:INTEGRATE:MODE MANUAL                   |                              |

## :INTEGrate:FUNCTION

|                                |                                           |                                         |
|--------------------------------|-------------------------------------------|-----------------------------------------|
| Description                    | Sets or returns the integration function. |                                         |
| Syntax                         | :INTEGrate:FUNCTION {WATT AMPErE}         |                                         |
| Query Syntax                   | :INTEGrate:FUNCTION?                      |                                         |
| Parameter/<br>Return parameter | WATT                                      | Select the integration function watt.   |
|                                | AMPErE                                    | Select the integration function ampere. |
| Example                        | :INTEGRATE:FUNCTION WATT                  |                                         |
|                                | :INTEGRATE:FUNCTION?                      |                                         |
|                                | ->:INTEGRATE:FUNCTION WATT                |                                         |

## :INTEGrate:TIMer

|                                |                                              |                   |
|--------------------------------|----------------------------------------------|-------------------|
| Description                    | Sets or returns the integration timer value. |                   |
| Syntax                         | :INTEGrate:TIMer {<NRf>,<NRf>,<NRf>}         |                   |
| Query Syntax                   | :INTEGrate:TIMer?                            |                   |
| Parameter/<br>Return parameter | 1st <NRf>                                    | 0 to 9999 (hours) |
|                                | 2nd <NRf>                                    | 0 to 59 (minutes) |
|                                | 3rd <NRf>                                    | 0 to 59 (seconds) |
| Example                        | :INTEGRATE:TIMER 1,0,0                       |                   |
|                                | :INTEGRATE:TIMER?                            |                   |
|                                | ->:INTEGRATE:TIMER 1,0,0                     |                   |

## :INTEGrate:STARt

|             |                     |
|-------------|---------------------|
| Description | Starts integration. |
| Syntax      | :INTEGrate:STARt    |
| Example     | :INTEGRATE:START    |

**:INTEGrate:STOP****Set** →

Description Stops integration.

Syntax :INTEGrate:STOP

Example :INTEGRATE:STOP

**:INTEGrate:RESet****Set** →

Description Resets the integrated value.

Syntax :INTEGrate:RESet

Example :INTEGRATE:RESET

**:INTEGrate:STATe**→ **Query**

Description Returns the integration status.

Query Syntax :INTEGrate:STATe?

|                  |        |                                               |
|------------------|--------|-----------------------------------------------|
| Return parameter | ERRor  | Integration overflows.                        |
|                  | RESet  | Integration resets.                           |
|                  | STARt  | Integration is in progress.                   |
|                  | STOP   | Integration stops.                            |
|                  | TIMEup | Integration stops due to integration timeout. |

Example :INTEGRATE:STATe?  
->RESET

## Math Commands

### :MATH

|                  |                                                                |                             |
|------------------|----------------------------------------------------------------|-----------------------------|
| Description      | Sets or returns the MATH equation.                             |                             |
| Syntax           | :MATH {<Equation>[,<Parameter1>][,<Parameter2>]}               |                             |
| Query Syntax     | :MATH?                                                         |                             |
| Parameter/       | Equation                                                       | {ADD SUB MUL DIV DIVA DIVB} |
| Return parameter | Parameter1                                                     | {U I P S Q}                 |
|                  | Parameter2                                                     | {U I P S Q}                 |
| Example          | :MATH ADD<br>Set math equation to A+B<br>:MATH?<br>->:MATH ADD |                             |

| <Equation>     | Definition        |
|----------------|-------------------|
| ADD            | A+B               |
| SUB            | A-B               |
| MUL            | AxB               |
| DIV            | A/B               |
| DIVA           | A/B <sup>2</sup>  |
| DIVB           | A <sup>2</sup> /B |
| <Parameter1,2> | Definition        |
| U              | Voltage U         |
| I              | Current I         |
| P              | Active power P    |
| S              | Apparent power S  |
| Q              | Reactive power Q  |

MEASure Commands

**:NUMeric:LIST:CLEar**

|             |                                                                                                                                  |                                                |
|-------------|----------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|
| Description | Clears numeric data output items (sets the items to NONE).                                                                       |                                                |
| Syntax      | :NUMeric:LIST:CLEar {ALL <NRf>[,<NRf>]}                                                                                          |                                                |
| Parameter   | ALL                                                                                                                              | Clear all items.                               |
|             | 1st <NRf>                                                                                                                        | 1 to 8 (the number of the first item to clear) |
|             | 2nd <NRf>                                                                                                                        | 1 to 8 (the number of the last item to clear)  |
| Example     | :NUMERIC:LIST:CLEAR ALL                                                                                                          |                                                |
| Note        | If the 2nd <NRf> is omitted, the output item specified by the first and all following output items (up to number 8) are cleared. |                                                |

**:NUMeric:LIST:DELeTe**

|             |                                      |                                                  |
|-------------|--------------------------------------|--------------------------------------------------|
| Description | Deletes numeric data output items.   |                                                  |
| Syntax      | :NUMeric:LIST:DELeTe {<NRf>[,<NRf>]} |                                                  |
| Parameter   | 1st <NRf>                            | 1 to 50 (the number of the first item to delete) |
|             | 2nd <NRf>                            | 1 to 50 (the number of the last item to delete)  |

|         |                                                                                                                                                                                                                                                                                                        |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Example | <p>:NUMERIC:LIST:DELETE 1 (Deletes ITEM1 and shifts ITEM2 and subsequent items forward).</p> <p>:NUMERIC:LIST:DELETE 1,3 (Deletes ITEM1 to ITEM3 and shifts ITEM4 and subsequent items forward).</p>                                                                                                   |
| Note    | <ul style="list-style-type: none"> <li>When output items are deleted, subsequent items shift forward to fill the empty positions. Empty positions at the end are set to NONE.</li> <li>If the second &lt;NRF&gt; is omitted, only the output item specified by the first number is deleted.</li> </ul> |

## :NUMeric:HOLD

|                  |                                                                                    |                                     |
|------------------|------------------------------------------------------------------------------------|-------------------------------------|
| Description      | Sets or returns the on/off (hold/release) status of the numeric data hold feature. |                                     |
| Syntax           | :NUMeric:HOLD {<Boolean> OFF ON}                                                   |                                     |
| Query Syntax     | :NUMeric:HOLD?                                                                     |                                     |
| Parameter        | <Boolean>0                                                                         | OFF                                 |
|                  | <Boolean>1                                                                         | ON                                  |
| Return parameter | 0                                                                                  | Turn the numeric hold function off. |
|                  | 1                                                                                  | Turn the numeric hold function on.  |
| Example          | <p>:NUMERIC:HOLD ON</p> <p>:NUMERIC:HOLD?</p> <p>-&gt;:NUMERIC:HOLD 1</p>          |                                     |

## Note

- If :NUMeric:HOLD is set to ON before :NUMeric[:NORMAl]:VALue? or :NUMeric:LIST:VALue? is executed, all the numeric data at that point in time can be held internally.
  - As long as :NUMeric:HOLD is set to ON, numeric data is held even when the numeric data on the screen is updated.
  - If :NUMeric:HOLD is set to ON after having already been set to ON before, the numeric data is cleared, and the most recent numeric data is held internally. When retrieving numeric data continuously, this method can be used to circumvent the need to repeatedly set :NUMeric:HOLD to OFF.

|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description  | Returns the numeric list data of harmonic measurement at the specified block number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Query Syntax | :RECall:LIST:VALue? {<NRf>}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Parameter    | <NRf> 1 to 1000 (block number)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Example      | <ul style="list-style-type: none"> <li>• if &lt;NRf&gt; is specified, the numeric list data at the specified block number will be returned.</li> <li>• If you omit &lt;NRf&gt; or specify a number greater than the number of blocks that contain stored measured data (the number returned by :RECall:NUMber?), the entire returned numeric data will be “NAN” (no data).</li> <li>• The output items and format are the same as those of “:NUMeric:LIST:VALue? (when the item number is not specified).” To set the output items and format, use the NUMeric group commands.</li> </ul> |

**:RECall:PANel**

Set →

|             |                               |
|-------------|-------------------------------|
| Description | Loads a setup parameter file. |
| Syntax      | :RECall:PANel {<NRf>}         |
| Parameter   | <NRf> 1 to 4 (file number)    |
| Example     | :RECall:PANel 2               |

## STATus Commands

|                         |     |
|-------------------------|-----|
| :STATus .....           | 216 |
| :STATus:CONDition ..... | 216 |
| :STATus:EESER .....     | 216 |
| :STATus:EESR .....      | 217 |
| :STATus:ERRor .....     | 217 |
| :STATus:FILTer<x> ..... | 218 |
| :STATus:QENable .....   | 219 |
| :STATus:QMESsage .....  | 219 |

### :STATus

→ Query

**Description** Returns all the settings for the communication status feature.

**Query Syntax** :STATus?

**Return parameter** <String>

### :STATus:CONDition

→ Query

**Description** Returns the contents of the condition register.

**Query Syntax** :STATus:CONDition?

**Return parameter** <NR1> 0 to 65535

**Example** :STATus:CONDITION?  
-> 8

**Note** For information about the condition register, see Appendix, "Status system" at page 238.

Set →

### :STATus:EESER

→ Query

**Description** Sets or returns the extended event enable register.

**Syntax** :STATus:EESER {<NRf>}

|                                |                                                                                          |
|--------------------------------|------------------------------------------------------------------------------------------|
| Query Syntax                   | :STATus:EES?                                                                             |
| Parameter/<br>Return parameter | <NRf> 0 to 65535                                                                         |
| Example                        | :STATUS:EES 16<br>:STATUS:EES?<br>-> :STATUS:EES 16                                      |
| Note                           | For information about the condition register, see Appendix, "Status system" at page 238. |

**:STATus:EESR**

|                  |                                                                                          |
|------------------|------------------------------------------------------------------------------------------|
| Description      | Returns the contents of the extended event register and clears the register.             |
| Query Syntax     | :STATus:EESR?                                                                            |
| Return parameter | <NR1> 0 to 65535                                                                         |
| Example          | :STATUS:EESR?<br>-> 16                                                                   |
| Note             | For information about the condition register, see Appendix, "Status system" at page 238. |

**:STATus:ERRor**

|                  |                                                                                                  |
|------------------|--------------------------------------------------------------------------------------------------|
| Description      | Returns the error code and message of the last error that has occurred (top of the error queue). |
| Query Syntax     | :STATus:ERRor?                                                                                   |
| Return parameter | <String>                                                                                         |
| Example          | :STATUS:ERROR?<br>-> 113, "Undefined Header"                                                     |

|      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## :STATus:QENable

|                  |                                                                                                         |                  |
|------------------|---------------------------------------------------------------------------------------------------------|------------------|
| Description      | Sets or returns whether messages other than errors will be stored to the error queue (ON) or not (OFF). |                  |
| Syntax           | :STATus:QENable {<Boolean> OFF ON}                                                                      |                  |
| Query Syntax     | :STATus:QENable?                                                                                        |                  |
| Parameter        | <Boolean>0                                                                                              | OFF              |
|                  | <Boolean>1                                                                                              | ON               |
| Return parameter | 0                                                                                                       | Function is off. |
|                  | 1                                                                                                       | Function is on.  |
| Example          | :STATus:QENABLE ON<br>:STATus:QENABLE?<br>-> :STATus:QENABLE 1                                          |                  |

## :STATus:QMESsage

|                  |                                                                                                                   |                  |
|------------------|-------------------------------------------------------------------------------------------------------------------|------------------|
| Description      | Sets or returns whether message information will be attached to the response to the STATus:ERROR? query (ON/OFF). |                  |
| Syntax           | :STATus:QMESsage {<Boolean> OFF ON}                                                                               |                  |
| Query Syntax     | :STATus:QMESsage?                                                                                                 |                  |
| Parameter        | <Boolean>0                                                                                                        | OFF              |
|                  | <Boolean>1                                                                                                        | ON               |
| Return parameter | 0                                                                                                                 | Function is off. |
|                  | 1                                                                                                                 | Function is on.  |

|         |                       |
|---------|-----------------------|
| Example | :STATUS:QMESSAGE ON   |
|         | :STATUS:QMESSAGE?     |
|         | -> :STATUS:QMESSAGE 1 |

---

## STORe Commands

|                       |     |
|-----------------------|-----|
| :STORe .....          | 221 |
| :STORe[:STATe].....   | 221 |
| :STORe:INTerval ..... | 221 |
| :STORe:PANel .....    | 222 |

## :STORe

→ Query

|             |                               |
|-------------|-------------------------------|
| Description | Returns all storage settings. |
|-------------|-------------------------------|

|        |         |
|--------|---------|
| Syntax | :STORe? |
|--------|---------|

|                  |          |
|------------------|----------|
| Return parameter | <String> |
|------------------|----------|

Set →

## :STORe[:STATe]

→ Query

|             |                                           |
|-------------|-------------------------------------------|
| Description | Sets or returns the storage on/off state. |
|-------------|-------------------------------------------|

|        |                                   |
|--------|-----------------------------------|
| Syntax | :STORe[:STATe] {<Boolean> OFF ON} |
|--------|-----------------------------------|

|              |                 |
|--------------|-----------------|
| Query Syntax | :STORe[:STATe]? |
|--------------|-----------------|

|           |                |
|-----------|----------------|
| Parameter | <Boolean>0 OFF |
|           | <Boolean>1 ON  |

|                  |   |                          |
|------------------|---|--------------------------|
| Return parameter | 0 | Storage function is off. |
|                  | 1 | Storage function is on.  |

|         |                  |
|---------|------------------|
| Example | :STORe:STATE ON  |
|         | :STORe:STATE?    |
|         | ->:STORe:STATE 1 |

Set →

## :STORe:INTerval

→ Query

|             |                                       |
|-------------|---------------------------------------|
| Description | Sets or returns the storage interval. |
|-------------|---------------------------------------|

|        |                                     |
|--------|-------------------------------------|
| Syntax | :STORe:INTerval {<NRf>,<NRf>,<NRf>} |
|--------|-------------------------------------|

|              |                  |
|--------------|------------------|
| Query Syntax | :STORe:INTerval? |
|--------------|------------------|

|                  |                                                                                                                                                                   |                   |
|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| Parameter/       | 1st <NRf>                                                                                                                                                         | 0 to 99 (hours)   |
| Return parameter | 2nd <NRf>                                                                                                                                                         | 0 to 59 (minutes) |
|                  | 3rd <NRf>                                                                                                                                                         | 0 to 59 (seconds) |
| Example          | :STORE:INTERVAL 0,0,1                                                                                                                                             |                   |
|                  | :STORE:INTERVAL?                                                                                                                                                  |                   |
|                  | ->:STORE:INTERVAL 0,0,1                                                                                                                                           |                   |
| Note             | <ul style="list-style-type: none"> <li>When time interval is set 00:00:00, the storage interval is identical with the designated data update interval.</li> </ul> |                   |

## :STORe:PANel

|             |                                   |                      |
|-------------|-----------------------------------|----------------------|
| Description | Saves setup parameters to a file. |                      |
| Syntax      | :STORe:PANel {<NRf>}              |                      |
| Parameter   | <NRf>                             | 1 to 4 (file number) |
| Example     | :STORe:PANel 1                    |                      |

SYSTem Commands

|                                         |     |

## Specifications

Below are the basic conditions required to operate the GPM-8310 within specification:

- Calibration: Yearly
- Operating Environment: 18~28 °C (64.4~82.4°F)
- Humidity: <80%RH,
- Accuracy:  $\pm$  (% of reading + % of range)
- The specifications apply when it warmed up for at least 30 minutes and operates in the slow rate.
- The power supply cable must be grounded to ensure accuracy.
- Input voltage and current must be standard sine wave.
- The power factor must be 1.
- The crest factor must be 3.
- The common-mode voltage must be zero.

## General Specifications

### Specification Conditions:

Temperature: 23°C $\pm$ 5°C

Humidity: <80%RH(non-condensing)

### Operating Environment: (0~40°C)

Temperature Range: 30~40°C, Relative Humidity: <70%RH(non-condensing);  
>40°C, Relative Humidity: <50%RH(non-condensing)

Indoor use only

Altitude: <2000 meters

Pollution degree 2

### Storage Conditions (-40~70°C)

Humidity: <90%RH(non-condensing)

### General:

Power Source: 100-240 VAC 50/60Hz

Power Consumption: Max 30VA

Bench Dimensions: 268 mm (W) X 107 mm (H) X 379 mm (D) (w/t bumpers)

Weight: Approximately 2.9 kg

## Input

\* 50Hz/60Hz Compliant IEC61000-4-7 (Update Rate must be ≥ 0.25S).

\* Harmonic calculation: FFT method in which FFT data length is divided into 2 types: 1024 and 4096.

\* FFT data length automatically switches in accord with the Frequency and Update Rate of measured signal.

## D/A Output (Options)

| Item                      | Specifications                                                                                                                      |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| Output voltage            | ±5 V FS (approach ±7.5 V maximum) against each rated value.                                                                         |
| Number of output channels | 4                                                                                                                                   |
| Output items              | Set for each channel : V, I, P, VA, VAR, PF, DEG, VHZ, IHZ, Vpk, Ipk, WP, WP±, q, q±, Off                                           |
| Accuracy                  | ±(accuracy of each measurement item + 0.2% of FS) (FS = 5 V)                                                                        |
| D/A conversion resolution | 16 bits                                                                                                                             |
| Minimum load              | 100 kΩ                                                                                                                              |
| Update Interval           | Same as the data update interval.<br>In the case of Auto Update Rate, update interval is equal to signal interval. More than 100ms. |
| Temperature coefficient   | ±0.05%/°C of FS                                                                                                                     |

## Remote Control Input/Output Signal (Options)

| Item                         | Specifications                                     |
|------------------------------|----------------------------------------------------|
| Remote control input signal  | EXT HOLD, EXT TRIG, EXT START, EXT STOP, EXT RESET |
| Remote control output signal | INTEG BUSY                                         |
| I/O level                    | TTL                                                |
| I/O logic format             | Negative logic, Falling edge                       |

## Digital IO Signal (Options)

| Item                      | Specifications         |
|---------------------------|------------------------|
| I/O control output signal | OUT1, OUT2, OUT3, OUT4 |
| I/O level                 | TTL                    |
| I/O sink current          | Max 100mA (per/ch)     |

\* Q (VAR), S (VA),  $\lambda$  (PF) and  $\Phi$  (DEG) are originated from the measured values including voltage, current and active power which go through computation process. In respect to distorted signal input, accordingly, the value acquired from other instruments, which employ different methods, may differ from that acquired from GPM-8310 unit.

\* “Zero” will be shown for S or Q and “--” will be displayed for  $\lambda$  and  $\Phi$  when either current or voltage is less than 0.5% of the rated range (less than or equivalent to 1% when crest factor is set 6 or 6A).

# Status system

The diagram below is a description of the status system

The extended event register receives information about changes in the condition register, which indicates the instrument's internal condition. The information is the result of edge detection performed by the transition filter.

The following table lists the bit definitions for the condition register:

| Bit | Name                | Decimal | Definition                                                                                               |
|-----|---------------------|---------|----------------------------------------------------------------------------------------------------------|
| 0   | Updating            | 1       | The measured data is being updated. UPD changing from 1 to 0 indicates that updating has been completed. |
| 1   | Integrate Busy      | 2       | During integration.                                                                                      |
| 2   | Integrate Time Busy | 4       | The integration timer is operating.                                                                      |
| 3   | Not Used            | 8       | (Reserved for future use)                                                                                |
| 4   | Frequency Over      | 16      | The frequency is outside the measurement range.                                                          |
| 5   | Store Busy          | 32      | During storage.                                                                                          |
| 6   | Measured Data Over  | 64      | The voltage or current exceeds its range.                                                                |
| 7   | Voltage Peak Over   | 128     | A peak over-range is detected in the voltage.                                                            |
| 8   | Current Peak Over   | 256     | A peak over-range is detected in the current.                                                            |
| 9   | Not Used            | 512     | (Reserved for future use)                                                                                |
| 10  | Not Used            | 1024    | (Reserved for future use)                                                                                |
| 11  | Not Used            | 2048    | (Reserved for future use)                                                                                |
| 12  | Not Used            | 4096    | (Reserved for future use)                                                                                |
| 13  | Not Used            | 8192    | (Reserved for future use)                                                                                |
| 14  | Not Used            | 16384   | (Reserved for future use)                                                                                |
| 15  | Not Used            | 32768   | (Reserved for future use)                                                                                |

The transition filter parameters detect changes in the specified condition register bits (numeric suffixes 1 to 16) and overwrite the extended event register in the following ways.

| Condition | Definition                                                                                                                              |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------|
| RISE      | The specified extended event register bit is set to 1 when the corresponding condition register bit changes from 0 to 1.                |
| FALL      | The specified extended event register bit is set to 1 when the corresponding condition register bit changes from 1 to 0.                |
| BOTH      | The specified extended event register bit is set to 1 when the corresponding condition register bit changes from 0 to 1 or from 1 to 0. |
| NEVer     | Always zero.                                                                                                                            |

The following table describes the Standard Event Register

| Bit | Name               | Decimal | Definition                                                                                                                                                                                  |
|-----|--------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0   | Operation Complete | 1       | All commands prior to and including *OPC have been executed.                                                                                                                                |
| 1   | Not Used           | 2       | (Reserved for future use)                                                                                                                                                                   |
| 2   | Query Error        | 4       | The instrument tried to read the output buffer but it was empty. Or, a new command line was received before a previous query has been read. Or, both the input and output buffers are full. |
| 3   | Device Error       | 8       | A device error, including a self-test error or calibration error, occurred (an error in the -300 range or any positive error has been generated).                                           |
| 4   | Execution Error    | 16      | An execution error occurred (an error in the -200 range has been generated).                                                                                                                |
| 5   | Command Error      | 32      | A command syntax error occurred (an error in the -100 range has been generated).                                                                                                            |
| 6   | Not Used           | 64      | (Reserved for future use)                                                                                                                                                                   |
| 7   | Power On           | 128     | Power has been cycled since the last time the event register was read or cleared.                                                                                                           |

The following table describes the Status Byte Register.

| Bit | Name              | Decimal | Definition                                                                                                                          |
|-----|-------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------|
| 0   | Not Used          | 1       | (Reserved for future use)                                                                                                           |
| 1   | Not Used          | 2       | (Reserved for future use)                                                                                                           |
| 2   | Error Queue       | 4       | One or more errors have been stored in the Error Queue. Use STAT:ERR? to read and delete errors.                                    |
| 3   | Extended Event    | 8       | One or more bits are set in the Extended Event Register (bits must be enabled, see STAT:ESEE).                                      |
| 4   | Message Available | 16      | Data is available in the instrument's output buffer.                                                                                |
| 5   | Standard Event    | 32      | One or more bits are set in the Standard Event Register (bits must be enabled, see *ESE).                                           |
| 6   | Request Service   | 64      | One or more bits are set in the Status Byte Register and may generate a Request for Service (RQS). Bits must be enabled using *SRE. |
| 7   | Not Used          | 128     | (Reserved for future use)                                                                                                           |

## Declaration of Conformity

We

**GOOD WILL INSTRUMENT CO., LTD.**

declare that the below mentioned product

**Type of Product:** Digital Power Meter

**Model Number:** GPM-8310

are herewith confirmed to comply with the requirements set out in the Council Directive on the Approximation of the Law of Member States relating to EMC (2014/30/EU), LVD (2014/35/EU), WEEE (2012/19/EU) and RoHS (2011/65/EU).

For the evaluation regarding the Electromagnetic Compatibility and Low Voltage Directive, the following standards were applied:

| © EMC                                                             |                                                                                            |

## Power measurement

---

### Method

- Direct read method: Directly read the measurement value measured from power measuring instrument.
  - The average power method: Record the actual power value within a settable period of time and then take the average. A settable period of time isn't less than 10min. The maximum measurement interval is one second.
  - Energy accumulation method: Measure the energy within a settable period of time and then divide it by the time to get the power. A settable period of time isn't less than 10min. The cumulative energy must be greater than the resolution by 200 times.
- 

### Measurement for small current

Voltage measurement mode measured from power supply side (Connect to ammeter internally). The current measurement is accurate. The voltage measurement on load could be larger than the actual one due to partial pressure of multi-measurement ammeter.

---

### Connection

$$\text{Power loss} = (\text{Input current}[A])^2 \times 505\text{m}\Omega$$

## Measurement for large current

Voltage measurement mode measured from load side (Connect to ammeter externally).

The voltage measurement is accurate. The current measurement on load could be larger than the actual one due to leakage current of multi-measurement voltage.

---

### Connection

$$\text{Power loss} = (\text{Input voltage[V]})^2 / 2\text{M}\Omega$$

## Introduction to IEC-62301

IEC 62301-2011 standard is an international basic standard for measuring standby power consumption of household appliances which is issued by IEEC. It is a standby power consumption measurement method for the various household appliances, power supply, audio and video appliances to comply with. The latest version for this standard is second edition of German standard IEC62301: 2011 (British regulations EN50564: 2011) which is issued on January, 2011. Only the products comply to the standard can have CE marking affixed on it.

### Recommended parameters for power measurement

---

- Power resolution is less than or equal to 1mW.
- Time integrator function is available.
- Electric energy resolution is less than or equal to 1mWh and cumulative time resolution is less than or equal to 1 second.
- The crest factor is greater than or equal to 3.
- The minimum current range is less than or equal to 10mA.
- The active power includes AC and DC components.
- Over-range automatic alarm function is available.
- Turning off the auto range function is available.
- Harmonic bandwidth is greater than or equal to 2.5kHz.

---

The GPM-8310 meets all of the features listed above.

## EUP Directive Lot6 specifications

---

Ecodesign directive for energy-using products:

The power loss requirement for the products with external power supply such as information devices, consumer electronics product, household appliances, toys, entertainment and sports products and so on in standby and off mode is as below.

| Mode/Limit    |                                         | 2010.01   | 2013.01     |
|---------------|-----------------------------------------|-----------|-------------|
| Standby mode  | Products with time display function.    | $\leq 2W$ | $\leq 1W$   |
|               | Products without time display function. | $\leq 1W$ | $\leq 0.5W$ |
| Shutdown mode |                                         | $\leq 1W$ | $\leq 0.5W$ |

## Connection Guide

### Rear panel

Direct connection:  $I < 1A$

#### Method 1

#### Method 2

Direct connection:  $1A < I < 20A$

Method 1

Method 2

Connection with CT/VT

## Connection with EXT1/2

EXT1

EXT2

Note

The optional GCP-300 accessory is required for EXT1 and EXT2 connection. Refer to your local dealer for more details.
